## About This Guide

This document provides detailed step-by-step installation and configuration instructions for successfully installing and setting up Veritas’s web-based Native Viewer. To enable native viewing simply requires the installation of ActiveX control.

## Revision History

The following table lists the information that has been revised or added since the initial release of this document. The table also lists the revision date for these changes.

| <b>Revision Date</b> | <b>New Information</b>   |
|----------------------|--|
| June 2017            | <ul style="list-style-type: none"><li>• Minor edits</li></ul>  |
| July 2016            | <ul style="list-style-type: none"><li>• Branding and minor edits</li></ul>   |

## Technical Support

Technical Support maintains support centers globally. All support services will be delivered in accordance with your support agreement and the then-current enterprise technical support policies.

For information about our support offerings and how to contact Technical Support, visit our website:

<https://www.veritas.com/support>

You can manage your Veritas account information at the following URL:

<https://my.veritas.com>

If you have questions regarding an existing support agreement, please email the support agreement administration team for your region as follows:

Worldwide (except Japan)

[CustomerCare@veritas.com](mailto:CustomerCare@veritas.com)

Japan

[CustomerCare\\_Japan@veritas.com](mailto:CustomerCare_Japan@veritas.com)

## Documentation

Make sure that you have the current version of the documentation. The latest documentation is available from:

- **Documentation** link at the bottom of any page in the Veritas E-Discovery Platform landing page.
- **Veritas Technologies LLC. All rights reserved. Products Web site:** <https://www.veritas.com/product/a-to-z>

## Documentation Feedback

Your feedback is important to us. Suggest improvements or report errors or omissions to the documentation. Include the document title, document version, chapter title, and section title of the text on which you are reporting. Send feedback to:

[eDiscovery.InfoDev@veritas.com](mailto:eDiscovery.InfoDev@veritas.com)

You can also see documentation information or ask a question on the Veritas community site.

# Installation and Configuration

## Overview

The Review and Redaction features in the Analysis & Review module include fully integrated functionality for viewing documents in native and near-native image format with the viewer option ("Native Viewer") available in Document Review mode. The Native Viewer provides a view of Microsoft® Outlook, and Office documents equivalent to the view generated when printing the same document in the native application. Native viewing of a document enhances document review, especially for documents (such as Excel and PowerPoint) where graphs and charts are important to the meaning of the document.

The Veritas eDiscovery Platform's viewer is web-based and does not require any installation of native applications on the user's computer. Simply install an ActiveX control in the browser to enable native viewing.

## Determine the Best Installation Method

When installing the Native Viewer, determine which Native Viewer installation methods is the best for your environment. The best method depends largely on the requirements of the organization deploying the application, as well as end users' rights, or permissions on individual workstations.

### On Demand versus Managed Deployment Installation Options

In general, if the Native Viewer must be installed on a single workstation, (used by only one person), and the user has "Power User" class or higher permissions, then the "On Demand Installation" is the best option for the end user. In every other scenario, the recommendation is to use the "Managed deployment" method.

### Prerequisites

Regardless of which installation approach you use, the Native Viewer requires installing the following prerequisite components, prior to running on a computer:

- Microsoft Windows

Windows Vista, Windows 7, Windows 8 (non Metro), and Server 2008 are all supported operating systems. Due to the nature of the add-on application (delivery as an ActiveX control), use on other operating systems is not supported. In order to use this feature, a terminal services-based deployment is recommended to accommodate clients using other operating systems.

- Internet Explorer 10 or greater

The Veritas eDiscovery Platform supports IE10 and IE11. See *Veritas Compatibility Matrix* for details.

## Requirements

This section documents the permission requirements for each installation method.

### Installation on Demand

When a user accesses the Review pane, and chooses the Native, Redaction, or Production views of a document, if the ActiveX control is not installed, the browser prompts the user to install the control. This control is installed on a per-user basis, rather than on a per-machine basis, and has the following additional requirements:

- User Account Control

User Account Control (UAC) must be disabled on a workstation in order to allow the user to install the Native viewer.

- User Rights

The Native Viewer is a signed ActiveX control. In order for a user to install the client control, their Internet Explorer browser needs to be configured to accept signed ActiveX controls, and must be enabled to run ActiveX controls.

The user must also have the appropriate permissions to download and install the control. By default, most versions of Windows come with the Standard User and Restricted User roles. A user assigned to a group with the "Standard User" permission set is able to install the Native Viewer ActiveX control, but a user with only the "Restricted User" role cannot install Native Viewer ActiveX.

Users on systems using enhanced security (Windows Vista, Windows 7, and Server 2008) must be a member of a group which has installation privileges. Veritas recommends that users on these target systems are members of the Power Users group (or a group with greater privileges).

- Executable Content in User Profile

Using this approach, files containing executable content (such as dynamic link libraries) will be installed in user profile folders. This content (following decompression) will amount to approximately 45 MB of data.

### Managed Deployment

The eDiscovery Platform provides a Windows Installer-based (MSI) version of the control, which can be deployed on a per-machine basis. The behavior of the installer differs somewhat from the installation on demand approach, and is recommended for deployment scenarios where any of the following are true:

- Multiple users log into the system, either concurrently or not (such as terminal services, Citrix® environments, or shared workstations)
- Users have restricted permissions
- User account control cannot be disabled
- Roaming profiles are in use

If moving forward with a managed deployment approach, an administrator can install the installer either on a baseline image, or deploy the installer using a push/pull deployment mechanism (such as Altiris™, SMS™, or Active Directory Group Policy). This requires two additional prerequisites:

- Microsoft Visual C++ 2008 SP1 runtime

The Microsoft Visual C++ 2008 SP1 runtime must be installed. Without the runtime installed, users will encounter issues attempting to launch the viewer.

- Trusted Site

Users accessing any/all eDiscovery Platform servers must be added to the Trusted Sites (or Local Intranet) zone of Internet Explorer. Without adding the site to one of these privileged zones, the system will revert to the behavior of the installation On Demand approach. This addition (or wildcard addition based on domain) can be done using a managed deployment approach as well.

## Installing the Native Viewer (ActiveX)

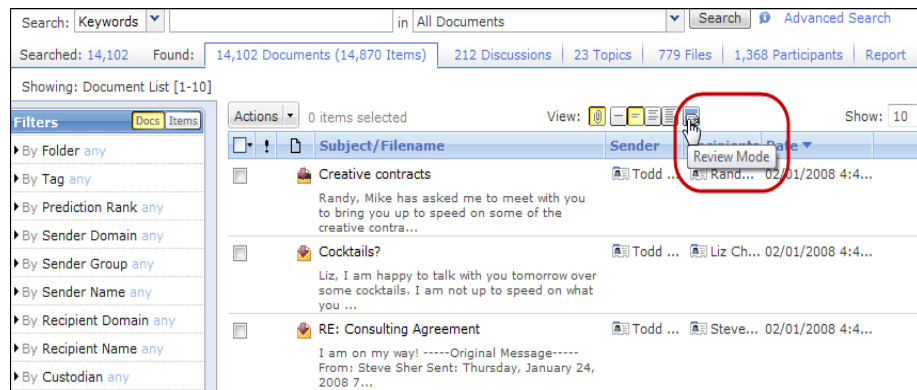

Follow the set of installation steps for the installation method that best suits your needs.

## Installation on Demand

**Note:** If you access the platform from a desktop that is shared by different Windows users, the Managed Deployment installation approach is recommended.

To install the Native Viewer (ActiveX control):

1. Navigate to the appliance and open a case for which Review and Redaction is enabled. Run a search, and click to view in Review mode.

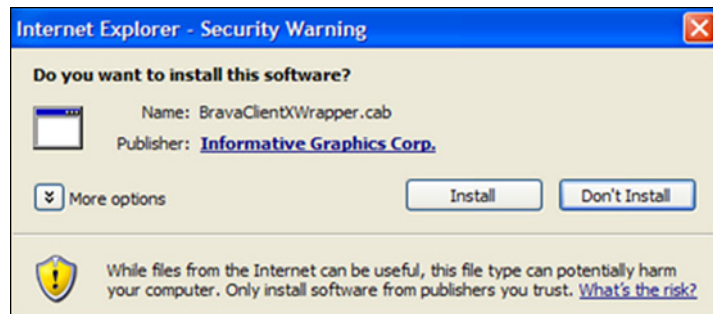

2. On the review page, click the **View** drop-down menu and select **Native/Image** view.

When you try to use the Native Viewer for the first time, the following warning might appear at the top of the browser.

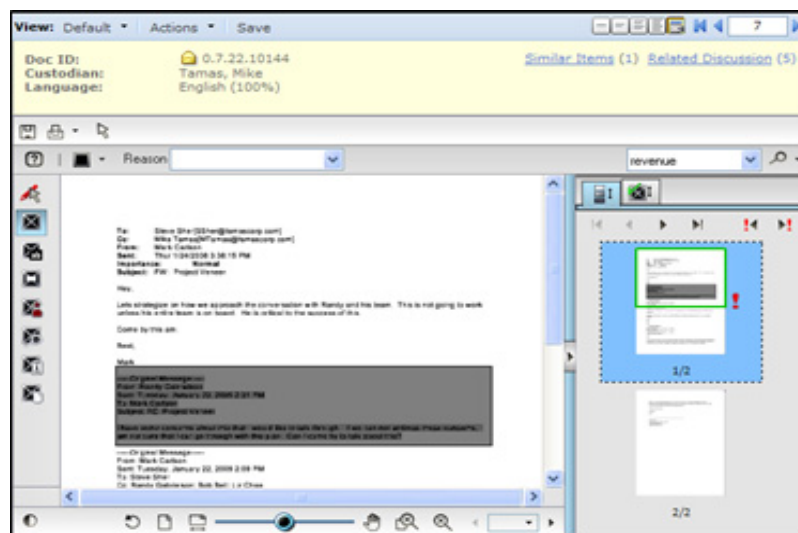

*"To help protect your security, Internet Explorer has restricted this webpage from running scripts or ActiveX controls that could access your computer. Click here for options..."*

3. If a popup appears to refresh the browser, click **Refresh**. Otherwise, you may have to manually clear the browser and internet cache.
4. Click the warning and accept the ActiveX install. A popup appears prompting for permission to install the viewer ActiveX control.

5. Click **Install** to begin.

When the installation completes, the document opens in native mode.

You have successfully installed and run the Native Viewer ActiveX control. If you have any difficulty installing the ActiveX control, contact Technical Support.

## Managed Deployment Installation

There are two general approaches for using a Windows Installer-based installer for the Native Viewer: Manual installation or Enterprise deployment.

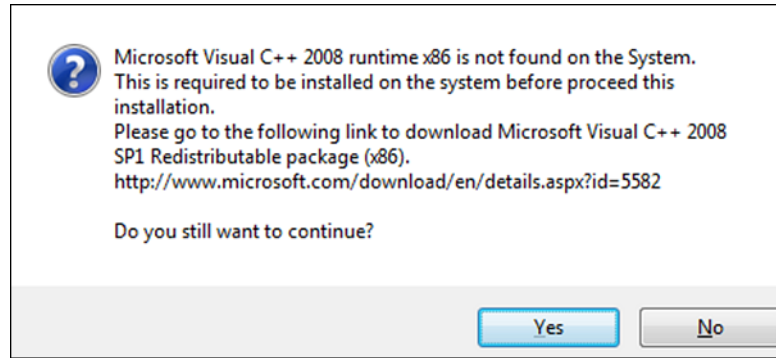

In either case, an administrator will need to log in to the target computer, and run the Native Viewer installer.

### Manual Installation

To install the Native Viewer using a Managed Deployment approach:

1. Log in to the target computer and run the Native Viewer (ActiveX control) installer.

**Note:** The computer must have the Microsoft Visual C++ 2008 SP1 runtime installed. Without this runtime installed, certain components of the viewer will not work as expected; a warning appears if the component is not installed or out of date.

2. Once complete, navigate to the **utilities\NativeViewer** folder and run the Native Viewer (ActiveX) installer.

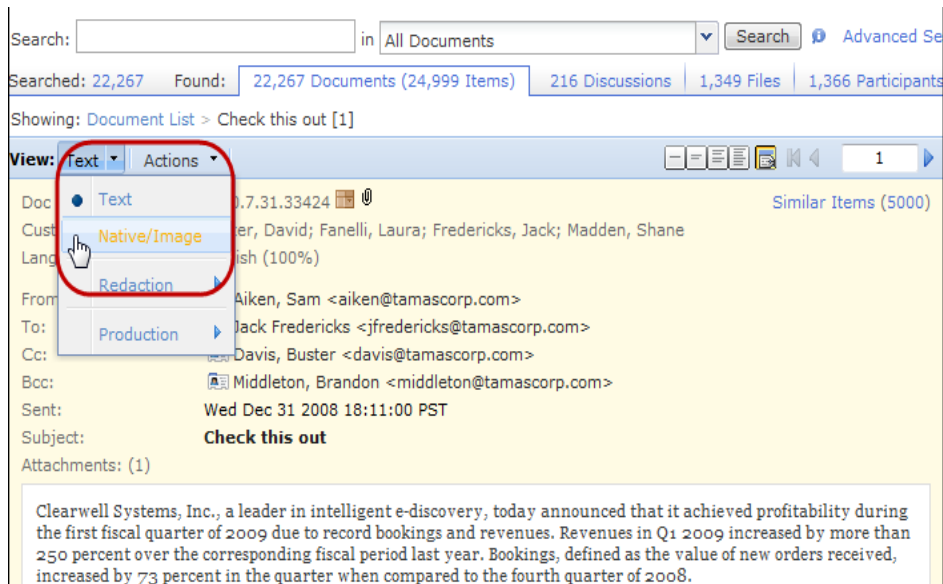

The InstallShield Wizard opens and guides you through the remaining steps for Native Viewer installation.

Once installation is complete, the Native Viewer becomes available for uninstall through the Control Panel (Veritas Native Viewer (ActiveX) 7.2).

- Finally, browse to an appliance, log on, and open a case to view in Review mode.

On the review screen, click the View drop-down menu and select Native/Image view.

If a yellow bar appears at the top of the page, it indicates that either:

- The computer does not have the viewer installed (verify through the Control Panel's Add or Remove Programs utility).
- The site you are accessing is not a member of either the Local Intranet, or the Trusted Sites zone in Internet Explorer. As a member of either of these zones, the website has permission to launch the ActiveX control installed by the installer.

To validate that a site is in one of these trusted zones, from your browser, either:

- Verify that the site in use either by going to **File > Tools > Internet Options** and clicking the **Security** tab (see Appendix),

- Browse to the site, and check the status shown at the bottom right of the Internet Explorer window, in the status bar:

## Enterprise Deployment

To deploy this product enterprise-wide, administrators can use any standard Managed deployment application. Veritas validates using both Microsoft Systems Management Server and Active Directory group policy (Software Installation) deployment as managed deployment applications.

Since this is a typical InstallShield installer, any of the InstallShield options can be used to manage the deployment. For example, to deploy the installer quietly, simply run the following command:

```
C:\WINDOWS>msiexec /I "Clearwell Native Viewer (ActiveX)7.2.msi" /qn
```

Administrators can use any of the standard Windows Installer commands. For more information, refer to Microsoft's standard installer command line options at:

[http://msdn.microsoft.com/en-us/library/windows/desktop/aa367988\(v=vs.85\).aspx](http://msdn.microsoft.com/en-us/library/windows/desktop/aa367988(v=vs.85).aspx)

## Appendix A: User and Internet Settings Reference

To see what type of an account a user has:

1. From the Control Panel, double-click **Users and Passwords** (User Accounts in Windows XP).
2. Select the user account and click the **Properties** button.
3. In the Properties dialog, select the **Group Membership** tab for the user group.

To view your IE security settings:

1. In the Internet Explorer web browser, go to **Tools > Internet Options**.

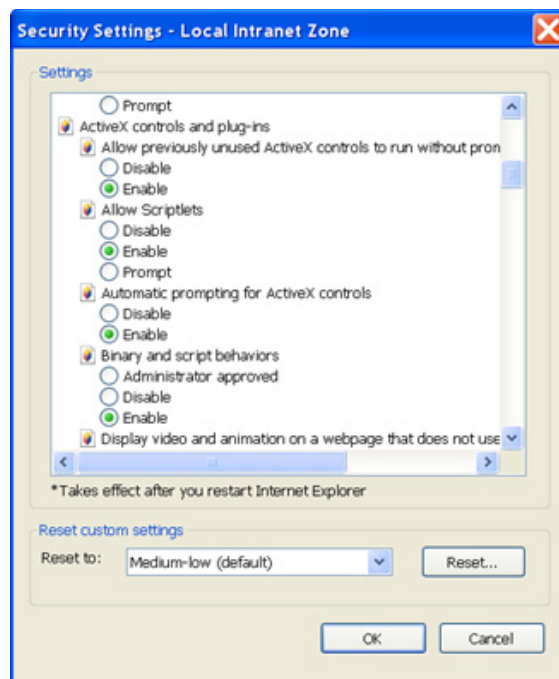

The Internet Options window opens.

- Click the **Security** tab, then **Custom Level**.

The Security Settings window opens.

- In the ActiveX controls and plug-ins section, select the following security settings:
  - Download Signed ActiveX Controls = Prompt
  - Run ActiveX Controls and Plug-ins = Enable

4. Click **OK**.

## Appendix B: Product Documentation

The table below lists the administrator and end-user documentation that is available for the Veritas eDiscovery Platform product.

### *Veritas eDiscovery Platform Documentation*

| <b>Document</b>                           | <b>Comments</b>   |
|---|---|
| <b>Installation and Configuration</b>     |   |
| Installation Guide                        | Describes prerequisites, and how to perform a full install of the Veritas eDiscovery Platform application   |
| Upgrade Overview Guide                    | Provides critical upgrade information, by version, useful prior to upgrading an appliance to the current product release  |
| Upgrade Guide                             | Describes prerequisites and upgrade information for the current customers with a previous version of the software application   |
| Componentized Virtualization Guide        | Describes deployment of Veritas eDiscovery Platform utilizing multiple low-capacity virtual machines. Includes prerequisites and directions for configuration and installation.   |
| Utility Node Guide                        | For customers using utility nodes, describes how to install and configure appliances as utility nodes for use with an existing software setup   |
| Native Viewer Installation Guide          | Describes how to install and configure the Brava Client for native document rendering and redaction for use during analysis and review  |
| Distributed Architecture Deployment Guide | Provides installation and configuration information for the Review and Processing Scalability feature in a distributed architecture deployment  |
| <b>Getting Started</b>                    |   |
| Navigation Reference Card                 | Provides a mapping of review changes from 8.x compared to 7.x and the user interface changes from 7.x compared to 6.x   |
| Administrator's QuickStart Guide          | Describes basic appliance and case configuration  |
| Reviewer's QuickStart Guide               | A reviewer's reference to using the Analysis & Review module  |
| Tagging Reference Card                    | Describes how tag sets and filter type impact filter counts   |
| <b>User and Administration</b>            |   |
| Legal Hold User Guide                     | Describes how to set up and configure appliance for Legal Holds, and use the Legal Hold module as an administrator  |
| Identification and Collection Guide       | Describes how to prepare and collect data for processing, using the Identification and Collection module  |
| Case Administration Guide                 | Describes case setup, processing, and management, plus pre-processing navigation, tips, and recommendations. Includes processing exceptions reference and associated reports, plus file handling information for multiple languages, and supported file types and file type mapping |
| System Administration Guide               | Includes system backup, restore, and support features, configuration, and anti-virus scanning guidelines for use with Veritas eDiscovery Platform   |

*Veritas eDiscovery Platform Documentation*

| <b>Document</b>  | <b>Comments</b>  |
|--|--|
| Load File Import Guide   | Describes how to import load file sources into Veritas eDiscovery Platform   |
| User Guide   | Describes how to perform searches, analysis, and review, including detailed information and syntax examples for performing advanced searches |
| Export and Production Guide  | Describes how to use, produce, and troubleshoot exports  |
| Transparent Predictive Coding User Guide   | Describes how to use the Transparent Predictive Coding feature to train the system to predict results from control data and tag settings     |
| Audio Search Guide   | Describes how to use the Audio Search feature to process, analyze, search and export search media content                                    |
| <b>Reference and Support</b>   |  |
| Audio Processing   | A quick reference card for processing multimedia sources   |
| Audio Search   | A quick reference card for performing multimedia search tasks  |
| Legal Hold   | A quick reference card of how to create and manage holds and notifications   |
| Collection   | A quick reference card of how to collect data  |
| OnSite Collection  | A quick reference for performing OnSite collection tasks   |
| Review and Redaction   | Reviewer's reference card of all redaction functions   |
| Keyboard Shortcuts   | A quick reference card listing all supported shortcuts   |
| Production   | Administrator's reference card for production exports  |
| User Rights Management   | A quick reference card for managing user accounts  |
| <b>Online Help</b>   |  |
| Includes all the above documentation (excluding Installation and Configuration) to enable search across all topics. To access this information from within the user interface, click <b>Help</b> . |  |
| <b>Release</b>   |  |
| Release Notes  | Provides latest updated information specific to the current product release  |
