

Veritas Enterprise Vault.cloud Release Notes

Veritas is proud to announce the January 2016 release of the Enterprise Vault.cloud service suite. This monthly release continues the on-going theme of product improvement. The release will occur on **Friday January 15th** during the maintenance windows for each datacenter with the exception of CloudLink which will be released via support article.

Highlights:

- Support for Exchange delegate access permissions** – Introducing support for the synchronization of delegation permissions that have been applied to on-premises Exchange user mailboxes and shared mailboxes. Enterprise Vault.cloud can synchronize delegation permissions that are granted to users and mail-enabled security groups. This feature enables a user to read in Personal.cloud the archived messages of Exchange mailboxes for which they have Full Access delegation permission.

A new Delegate Access panel on the Archive Administration Account Details page shows the delegate users or mail-enabled security groups that have synchronized delegate access permissions, and which permissions are granted in the archive.

*NOTE: The synchronization of delegation permissions requires the use of new features in CloudLink version 4.0.

- Improved user interface for Account Details** – The Account Details page has been redesigned with a clear, panel-based layout. The changes include a new History panel, which displays a summary of the 30 most recent changes made to that archive account's settings.

January Release Items

Component/Title	TFS	Description
O365	62149	Corrects issue that can prevent webfolder push from running
O365	65444	Corrects issue where some mailboxes deleted in O365 are not being disabled in EV.cloud
CloudLink*	56291	Users deleted from AD are not disabled in EV.cloud when using a custom LDAP query
CloudLink*	68958	Resolves a specific scenario where nested distribution group memberships are not updated
