About Veritas InfoScale product licensing

You must obtain a license to install and use Veritas InfoScale products.

You can choose one of the following licensing methods when you install a product:

- Install with a license key for the product
When you purchase a Veritas InfoScale product, you receive a License Key certificate. The certificate specifies the product keys and the number of product licenses purchased.
See [“Registering Veritas InfoScale using product license keys”](#) on page 14.
- Install without a license key (keyless licensing)
Installation without a license does not eliminate the need to obtain a license. The administrator and company representatives must ensure that a server or cluster is entitled to the license level for the products installed. Symantec reserves the right to ensure entitlement and compliance through auditing.
See [“Registering Veritas InfoScale product using keyless licensing”](#) on page 15.

If you encounter problems while licensing this product, visit the Veritas Licensing Portal:

<https://www.veritas.com/licensing/process/activate>

Registering Veritas InfoScale using product license keys

You can register your product license key in the following ways:

Using the
installer

The installer automatically registers the license at the time of installation or upgrade.

- You can register your license keys during the installation process. During the installation, you will get the following prompt:

```
1) Enter a valid license key
2) Enable keyless licensing and complete system licensing
```

```
How would you like to license the systems? [1-2,q] (2)
```

Enter **1** to register your license key.

- You can also register your license keys using the installer menu. Run the following command:

```
./installer
```

Select the **L) License a Product** option in the installer menu.

Manual

If you are performing a fresh installation, run the following commands on each node:

```
# cd /opt/VRTS/bin
# ./vxlicinst -k license key
# vxdctl license init
```

If you are performing an upgrade, run the following commands on each node:

```
# cd /opt/VRTS/bin
# ./vxlicinstupgrade -k license key
```

For more information:

Even though other products are included on the enclosed software discs, you can only use the Veritas InfoScale software products for which you have purchased a license.

Registering Veritas InfoScale product using keyless licensing

The keyless licensing method uses product levels to determine the Veritas InfoScale products and functionality that are licensed.

You can register a Veritas InfoScale product in the following ways:

Using the `installer`

- Run the following command:

```
./installer
```

The installer automatically registers the license at the time of installation or upgrade.

- You can also register your license keys using the installer menu.

Run the following command:

```
./installer
```

Select the **L) License a Product** option in the installer menu.

Manual

Perform the following steps after installation or upgrade:

- 1 Change your current working directory:

```
# export PATH=$PATH:/opt/VRTSvlic/bin
```

- 2 View the possible settings for the product level:

```
# vxkeyless displayall
```

- 3 Register the desired product:

```
# vxkeyless set prod_levels
```

where *prod_levels* is a comma-separated list of keywords. The keywords are the product levels as shown by the output of step 2.

Warning: Within 60 days of choosing this option, you must install a valid license key corresponding to the license level entitled, or continue with keyless licensing by managing the systems with Veritas InfoScale Operation Manager. If you fail to comply with the above terms, continuing to use the Veritas InfoScale product is a violation of your End User License Agreement, and results in warning messages.

For more information about keyless licensing, see the following URL:

<http://www.veritas.com/community/blogs/introducing-keyless-feature-enablement-storage-foundation-ha-51>

For more information to use keyless licensing and to download the Veritas InfoScale Operation Manager, see the following URL:

<https://www.veritas.com/product/storage-management/infoscale-operations-manager>

Installation and configuration of Veritas InfoScale products

This chapter includes the following topics:

- [Obtaining the product binaries](#)
- [Mounting the ISO image](#)
- [Assessing your systems](#)
- [Installing your Veritas InfoScale product](#)
- [Configuring your Veritas InfoScale product](#)

Obtaining the product binaries

The installation media or tar ball includes multiple products. When you run the installation program, you can choose which product to install. If you are not sure which product to install, refer to the high-level overview about the products.

See “[Components of the Veritas InfoScale product suite](#)” on page 10.

If you are not installing from the installation media, you need to obtain the product binaries from Symantec's electronic distribution site.

Obtaining the product binaries

- 1 Call Customer Care for your region by following the instructions provided at:

http://www.symantec.com/support/assistance_care.jsp

Do one of the following:

- If you have not obtained a license, ask Customer Care to email you a licensing template. Follow the instructions in the email to license your product, and repeat these instructions.
 - If you have already obtained a license, ask Customer Care to email you a FileConnect download template.
- 2 Locate the email that contains the FileConnect download template, and locate the serial number. (The serial number is not a license key; it is a code you need to download Veritas Infoscale products from the portal).
 - 3 Go to Symantec's electronic distribution website at:
http://www.symantec.com/products-solutions/licensing/activating-software/detail.jsp?detail_id=fileconnect.
 - 4 Select a language.
 - 5 Enter the serial number contained in the FileConnect download email, and click **Enter**, and then agree to the license agreement.
 - 6 Select the product you want to download.
 - 7 Under step 1, select a download method. Do one of the following:
 - If you are only downloading one item, click **HTTP Download** to make the download go faster.
 - If you are downloading more than one item, click **Managed Download**.
 - 8 Select the product you want to download, and click **Begin Downloading**.
- The binaries are available as a tar file or as an ISO image.

.tar.gz format **1** Open the tar file and save it to your local system.

2 Unzip the tar file.

```
# gunzip Veritas_InfoScale_\
<version>_<platform>.tar.gz
```

3 Untar the file. For example, enter the following:

```
# tar -xvf Veritas_InfoScale_\
<version>_<platform>.tar
```

ISO image format See "Mounting the ISO image" on page 19.

Mounting the ISO image

An ISO file is a disc image that must be mounted to a virtual drive for use. You must have superuser (root) privileges to mount the Veritas InfoScale ISO image.

To mount the ISO image

- 1 Log in as superuser on a system where you want to install Veritas InfoScale.
- 2 Associate the ISO image to a block device:

```
# lofiadm -a <ISO_image_path> <block_device>
```

Where:

<ISO_image_path> is the complete path to the ISO image

<block_device> is the complete path to the block device

- 3 Mount the image:

```
# mount -F hsfs -o ro <block_device> /mnt
```

Assessing your systems

Before you install, you can assess your systems for installation readiness using one of the following methods:

Automatically assessing your systems See [“Automatically assessing your systems”](#) on page 19.

Manually assessing your systems See [“Manually assessing your systems”](#) on page 20.

Automatically assessing your systems

You can use the data collection tool available on the Symantec Operations Readiness Tools (SORT) website to create a custom report that assesses your systems for installation readiness, and provides all the information you need to install your Veritas InfoScale product.

Note: If you automatically assess your systems, you can skip the instructions for creating a preinstallation checklist and checking the hardware compatibility list. The automatic assessment already generates that information.

To automatically assess your systems

- 1 Go to the My SORT page on the SORT website at:
<https://sort.symantec.com/home>
- 2 Find the **Custom Reports using Data Collectors** widget.
- 3 Click the **Data Collector** tab.
- 4 Click the appropriate link in the **Platform** column to download the data collection tool for your environment.
- 5 Follow the instructions in the readme file to install the data collection tool.
- 6 In your environment, run the data collection tool on each of the systems on which you plan to install the product. The data collection tool analyzes your systems and stores the results in an XML file.
- 7 On the widget's **Upload Report** tab, upload the XML file to generate a report.

If you plan to do a lot of Veritas Infoscale product installations, consider bookmarking the My SORT page on the SORT website at:

<https://sort.symantec.com/home>

Manually assessing your systems

Table 2-1 lists the tasks you need to perform to manually assess your systems.

Open the PDF and check the hardware or the software information depending on the compatibility list you have selected.</p>
---	---

Installing your Veritas InfoScale product

Note: Before you install, run the installation program with the `-precheck` option to check the recommended swap space, optimal memory size, and supported operating system versions.

```
# ./installer -precheck sys1 sys2
```

Keep the following information handy before you start the installation:

- The system name with the fully-qualified domain name
- The product license key if there are no plans to use keyless licensing
- The cluster name and cluster ID (high availability products only)

- The public NIC device name (high availability products only)
- The private heartbeat NIC device name (high availability products only)

To install your product

- 1 Mount the media or navigate to the installation directory.
- 2 From this directory, type the following command to start the installation on the local system. Use this command to install on remote systems if Secure Shell or Remote Shell communication modes are configured:

```
# ./installer
```

- 3 Follow the prompts of the installation program to install your product.

Configuring your Veritas InfoScale product

Each Veritas InfoScale product has several configurable components. The configuration steps differ according to the component you want to configure.

[Table 2-2](#) provides an overview of the configurable components and the corresponding documents that provide the configuration steps.

Patching and updating

This chapter includes the following topics:

- [Checking installed product versions and downloading maintenance releases and patches](#)
- [Obtaining installer patches](#)

Checking installed product versions and downloading maintenance releases and patches

Use the `installer` command with the `-version` option to:

- Determine the product packages that are installed on your system.
- Download required maintenance releases or patches .

The `version` option or the `showversion` script in the `/opt/VRTS/install` directory checks the specified systems and discovers the following:

- Veritas InfoScale product versions that are installed on the system
- All the required packages and the optional packages installed on the system
- Any required or optional packages (if applicable) that are not present
- Installed patches
- Available base releases (major or minor)
- Available maintenance releases
- Available patch releases

To check your systems and download maintenance releases and patches

- 1 Mount the media, or navigate to the installation directory.
- 2 Start the installer with the `-version` option.

```
# ./installer -version sys1 sys2
```

For each system, the installer lists all of the installed base releases, maintenance releases, and patches, followed by the lists of available downloads.

- 3 If you have Internet access, follow the prompts to download the available maintenance releases and patches to the local system.
- 4 If you do not have Internet access, you can download any needed maintenance releases and patches from the Symantec Operations Readiness Tools (SORT) Patch Finder page at:

<https://sort.symantec.com/patch/finder>

You can obtain installer patches automatically or manually.

See “[Obtaining installer patches](#)” on page 25.

Downloading maintenance releases and patches requires the installer to make outbound networking calls. You can also disable external network connection attempts.

See “[Disabling external network connection attempts](#)” on page 26.

Obtaining installer patches

You can access public installer patches automatically or manually on the Symantec Operations Readiness Tools (SORT) website's Patch Finder page at:

<https://sort.symantec.com/patch/finder>

To download installer patches automatically

- ◆ If you are running Veritas InfoScale version 7.0 or later, and your system has Internet access, the installer automatically imports any needed installer patch, and begins using it.

Automatically downloading installer patches requires the installer to make outbound networking calls. You can also disable external network connection attempts.

See “[Disabling external network connection attempts](#)” on page 26.

If your system does not have Internet access, you can download installer patches manually.

To download installer patches manually

- 1 Go to the Symantec Operations Readiness Tools (SORT) website's Patch Finder page, and save the most current patch on your local system.
- 2 Navigate to the directory where you want to unzip the file you downloaded in step 1.
- 3 Unzip the patch tar file. For example, run the following command:

```
# gunzip cpi-7.0P2-patches.tar.gz
```

- 4 Untar the file. For example, enter the following:

```
# tar -xvf cpi-7.0P2-patches.tar
patches/
patches/CPI7.0P2.pl
README
```

- 5 Navigate to the installation media or to the installation directory.
- 6 To start using the patch, run the `installer` command with the `-require` option. For example, enter the following:

```
# ./installer -require /target_directory/patches/CPI7.0P2.pl
```

Disabling external network connection attempts

When you execute the `installer` command, the installer attempts to make an outbound networking call to get information about release updates and installer patches. If you know your systems are behind a firewall, or do not want the installer to make outbound networking calls, you can disable external network connection attempts by the installer.

To disable external network connection attempts

- ◆ Disable inter-process communication (IPC).

To disable IPC, run the installer with the `-noipc` option.

For example, to disable IPC for system1 (sys1) and system2 (sys2) enter the following:

```
# ./installer -noipc sys1 sys2
```

How the discs are organized
