Technical Support

Symantec Technical Support maintains support centers globally. Technical Support's primary role is to respond to specific queries about product features and functionality. The Technical Support group also creates content for our online Knowledge Base. The Technical Support group works collaboratively with the other functional areas within Symantec to answer your questions in a timely fashion. For example, the Technical Support group works with Product Engineering and Symantec Security Response to provide alerting services and virus definition updates.

Symantec's support offerings include the following:

- A range of support options that give you the flexibility to select the right amount of service for any size organization
- Telephone and/or Web-based support that provides rapid response and up-to-the-minute information
- Upgrade assurance that delivers software upgrades
- Global support purchased on a regional business hours or 24 hours a day, 7 days a week basis
- Premium service offerings that include Account Management Services

For information about Symantec's support offerings, you can visit our website at the following URL:

www.symantec.com/business/support/index.jsp

All support services will be delivered in accordance with your support agreement and the then-current enterprise technical support policy.

Contacting Technical Support

Customers with a current support agreement may access Technical Support information at the following URL:

www.symantec.com/business/support/contact_techsupp_static.jsp

Before contacting Technical Support, make sure you have satisfied the system requirements that are listed in your product documentation. Also, you should be at the computer on which the problem occurred, in case it is necessary to replicate the problem.

When you contact Technical Support, please have the following information available:

- Product release level

- Hardware information
- Available memory, disk space, and NIC information
- Operating system
- Version and patch level
- Network topology
- Router, gateway, and IP address information
- Problem description:
 - Error messages and log files
 - Troubleshooting that was performed before contacting Symantec
 - Recent software configuration changes and network changes

Licensing and registration

If your Symantec product requires registration or a license key, access our technical support Web page at the following URL:

www.symantec.com/business/support/

Customer service

Customer service information is available at the following URL:

www.symantec.com/business/support/

Customer Service is available to assist with non-technical questions, such as the following types of issues:

- Questions regarding product licensing or serialization
- Product registration updates, such as address or name changes
- General product information (features, language availability, local dealers)
- Latest information about product updates and upgrades
- Information about upgrade assurance and support contracts
- Information about the Symantec Buying Programs
- Advice about Symantec's technical support options
- Nontechnical presales questions
- Issues that are related to CD-ROMs or manuals

Support agreement resources

If you want to contact Symantec regarding an existing support agreement, please contact the support agreement administration team for your region as follows:

| | |
|---------------------------------|--|
| Asia-Pacific and Japan | customercare_apac@symantec.com |
| Europe, Middle-East, and Africa | semea@symantec.com |
| North America and Latin America | supportsolutions@symantec.com |

Documentation

Your feedback on product documentation is important to us. Send suggestions for improvements and reports on errors or omissions. Include the title and document version (located on the second page), and chapter and section titles of the text on which you are reporting. Send feedback to:

doc_feedback@symantec.com

For information regarding the latest HOWTO articles, documentation updates, or to ask a question regarding product documentation, visit the Storage and Clustering Documentation forum on Symantec Connect.

<https://www-secure.symantec.com/connect/storage-management/forums/storage-and-clustering-documentation>

About Symantec Connect

Symantec Connect is the peer-to-peer technical community site for Symantec's enterprise customers. Participants can connect and share information with other product users, including creating forum posts, articles, videos, downloads, blogs and suggesting ideas, as well as interact with Symantec product teams and Technical Support. Content is rated by the community, and members receive reward points for their contributions.

Release Notes

This document includes the following topics:

- [Introduction](#)
- [Overview and features](#)
- [Requirements](#)
- [About Symantec Operations Readiness Tools](#)
- [New features and changes for DMPW](#)
- [Software limitations](#)
- [Known issues](#)
- [Documentation](#)
- [Acronyms](#)

Introduction

This document provides important information regarding Veritas Dynamic Multi-Pathing 6.0.2 for Windows (DMPW). Please review this entire document before using this product.

The information in the Release Notes supersedes the information provided in the product documents. You can download the latest version of this document from the Symantec SORT Web site:

<https://sort.symantec.com>

For the latest information on updates, patches, and other issues regarding this release, see the following Technote:

<http://www.symantec.com/docs/TECH161556>

Overview and features

This section provides an overview of Veritas Dynamic Multi-Pathing for Windows (DMPW) and describes its main features.

DMPW overview

Veritas Dynamic Multi-Pathing for Windows (DMPW) adds additional fault tolerance to disk storage by making use of multiple paths between a server/host computer and a disk in a storage array. A path is a connection between the server/host computer and the storage array's disks and consists of a host adapter and a SCSI bus connection to one or more SCSI disks or a fiber optic channel connected to a hub, switch, or array. Thus, multiple paths are made possible by connecting two or more host bus adapters with either SCSI or fiber optic cabling to the storage array. DMPW manages the multiple paths so that the data on each of the array's disks is accessible to the host computer. If a path to a disk fails, Dynamic Multi-Pathing automatically transmits data to and from the disk over an alternate path.

The paths on an array are set up to work in two ways—either in Active/Active mode, which provides load balancing of the data between multiple paths, or in Active/Passive mode, in which only one path is active and any remaining paths are backups.

DMPW is implemented through Veritas Dynamic Multi-Pathing for Windows Device Specific Modules (DMPW DSMs). DMP DSMs are designed to support a multipath disk storage environment set up with the Microsoft Multipath I/O (MPIO) solution. DMP DSMs work effectively with Windows to provide a fault tolerant multipath disk storage environment.

DMPW major features

The major features of Veritas Dynamic Multi-Pathing for Windows (DMPW) are the following:

- **Fault tolerance**
Provides fault tolerance to a disk system by using multiple paths to each disk. If the primary path fails, either at the card level or in the cabling from the card to the disk, a secondary path is automatically used.
- **Load balancing in Active/Active configurations**
When a system is configured as Active/Active, Dynamic Multi-Pathing makes use of all the paths to a disk for the transfer of I/O to and from the disk.
- **Support for multiple paths**
With DMP DSMs, the maximum number of I/O paths you can have is 16.

- **Dynamic recovery**
If an active path to a disk fails, Dynamic Multi-Pathing automatically flags the failed path and no longer attempts to transfer data on it. The failed path is monitored and is automatically restored to service when Dynamic Multi-Pathing detects that the path is functioning correctly. Dynamic Multi-Pathing automatically updates path status on the user display when a path fails or is restored to service.
- **Dynamic path recognition**
If you add a new path to your Dynamic Multi-Pathing configuration, running a rescan or rebooting your system causes Dynamic Multi-Pathing to detect the new path and display its status. If a failed or disabled path is restored to service, Dynamic Multi-Pathing automatically detects the status change and updates the display.

Requirements

For the latest information on supported hardware, see the Hardware Compatibility List (HCL) at:

<http://www.symantec.com/docs/TECH152806>

About Symantec Operations Readiness Tools

[Symantec Operations Readiness Tools \(SORT\)](#) is a website that automates and simplifies some of the most time-consuming administrative tasks. SORT helps you manage your datacenter more efficiently and get the most out of your Symantec products.

SORT can help you do the following:

- Prepare for your next installation or upgrade
 - List product installation and upgrade requirements, including operating system versions, memory, disk space, and architecture.
 - Analyze systems to determine if they are ready to install or upgrade Symantec products.
 - Download the latest patches, documentation, and high availability agents from a central repository.
 - Access up-to-date compatibility lists for hardware, software, databases, and operating systems.

- | | |
|--------------------|--|
| Manage risks | <ul style="list-style-type: none"> ■ Get automatic email notifications about changes to patches, array-specific modules (ASLs/APMs/DDIs/DDLs), and high availability agents from a central repository. ■ Identify and mitigate system and environmental risks. ■ Display descriptions and solutions for hundreds of Symantec error codes. |
| Improve efficiency | <ul style="list-style-type: none"> ■ Find and download patches based on product version and platform. ■ List installed Symantec products and license keys. ■ Tune and optimize your environment. |

Note: Certain features of SORT are not available for all products. Access to SORT is available at no extra cost.

To access SORT, go to:

<https://sort.symantec.com>

New features and changes for DMPW

This section describes the new features and changes introduced in Veritas Dynamic Multi-Pathing for Windows (DMPW) 6.0.2.

Windows Server 2012 support

- Windows Server 2012 64-bit (Full/Core): Standard Edition, Datacenter Edition, and Hyper-V Edition

Client support on Windows 8

SFW and SFW HA introduce support for the client components on Windows 8. The supported Windows 8 editions are as follows:

- Windows 8 Pro
- Windows 8 Enterprise

Software limitations

The following limitations apply to DMP DSMs.

NBU restore changes the disk path and UUID due to which VMwareDisks resource reports an unknown state

When you restore a VMware virtual machine using NetBackup (NBU), it changes the path and UUID of disks because of which the VMwareDisks agent resource goes into an unknown state as it has the old path and UUID configured in its "DiskPaths" attribute. As a workaround, you need to manually provide the new disk path in the "DiskPaths" attribute of the affected VMwareDisks resource and delete the incorrect UUID (and the colon after it) from the attribute. (2913645)

DSM ownership of LUNs

Do not use a DMP DSM together with a third-party DSM for the same array. Only one DSM at a time can claim the LUNs in an array. According to Microsoft Multipath I/O (MPIO) documentation, if multiple DSMs are installed, the Microsoft MPIO framework contacts each DSM to determine which is appropriate to handle a device. There is no particular order in which the MPIO framework contacts the DSMs. The first DSM to claim ownership of the device is associated with that device. Other DSMs cannot claim an already claimed device. Therefore, to ensure that the DMP DSM claims the LUNs of an array, no other DSM should be installed for that same array.

Known issues

The following known issues exist in this release of Veritas Dynamic Multi-Pathing for Windows (DMPW). They are grouped under the following headings:

See "[Installation known issues](#)" on page 11.

See "[Other known issues](#)" on page 13.

For the latest information on issues regarding this release, see the following Technote:

<http://www.symantec.com/docs/TECH161556>

Installation known issues

The following are known installation issues.

The installation may fail with "The system cannot find the file specified" error

This issue occurs if the vxinstaller service is in a failed state during the product installation. (2560071)

Workaround: Delete the vxinstaller service and then run the installation wizard again.

Error while running the Windows Data Collector from the product software disc

This issue may occur if you run the Windows Data Collector from the product software disc. (3061659)

The following error message is displayed:

```
.Net Framework 2.0 is required for this feature. This Windows 2012 datacenter edition has .net framework 4.5 installed.
```

Workaround: This issue does not occur for the Windows Data Collector available on the SORT Web site. Download, install, and run the Windows data collector from the SORT Web site to address this issue.

Alternatively, to run the Windows Data Collector from the product software disc, perform one of the following:

- Install .Net Framework 2.0 on your system.
- Enable the .Net 3.5 feature on Windows Server 2012.

Bug check may occur when adding DMPW DSM option

After installing SFW, adding the DMPW DSM option, with Windows Add or Remove Programs, may result in bug check 0xD1. This issue has been reported to Microsoft (SRZ080421000462). (1251851)

Delayed installation on certain systems

You may experience a slower installation on certain systems.

This issue occurs, if you have configured any software restriction policies on the system. During the installation the restriction policies increases the package verification time and thus the over all installation time is increased. (2516062)

Installation may fail with "Unspecified error" on a remote system

This issue occurs if the vxInstaller service does not start on the remote node to begin the installation. (2429526)

Workaround: Run the installation locally on the system where the installation has failed.

vxlicrep and GUI showing wrong product name for DMPW license

In a graphical user interface (GUI) based installation, on the **License** page, when you enter the license key and select the key to view the licensed options, it shows the wrong product name and does not list product features. In a command-line interface (CLI) based installation, you can see this by using the `vxlicrep` command. (2160859)

There is no workaround for this issue.

Uninstallation may fail to remove certain folders

After a successful uninstallation, the product installer may fail to remove the following folders:

- VERITAS Object Bus
- Veritas Shared
- Veritas Volume Manager

These folders contain application logs. The reinstallation of the product will not be affected if these folders are not deleted. (2591541, 2654871)

Workaround: You can safely delete these folders manually.

Other known issues

The following are other known issues for this release.

vxdmadm's deviceinfo and pathinfo with disk specified in p#c#t#l# parameter displays information only by one path

The `deviceinfo` and `pathinfo` commands of `vxdmadm` work with only one `p#c#t#l#` parameter shown with the disk in the `vxdmadm disk list` command. Even if the disk has more than one path, the `deviceinfo` and `pathinfo` commands with `p#c#t#l#` values of other paths fail with the Invalid Argument error. (2162670)

Changes made to a multipathing policy of a LUN using the Microsoft Disk Management console, do not appear on the VEA GUI

DMP DSMs do not manage the load balance settings made with the Microsoft Disk Management console. So changes made to a multipathing policy using the Microsoft Disk Management console do not appear on the VEA GUI.

Changing the load balance settings for DMP DSMs must be done using the SFW VEA GUI or CLI. (1859745)

VEA or CLI operations for DMP DSMs fail without providing error message if WMI service is disabled

The Windows Management Instrumentation (WMI) service is required for using the DMP DSM feature. If you disable the WMI service, the wizards or commands for DMP DSM operations that require the WMI service will fail. The message window displays only an error code without a message explaining the cause of the failure. (2590359)

Documentation

Veritas Dynamic Multi-Pathing for Windows includes the following documentation, in addition to the release notes.

- *Veritas Dynamic Multi-Pathing for Windows Installation and Upgrade Guide*
- *Veritas Dynamic Multi-Pathing for Windows Administrator's Guide*

You can download the latest version of these documents from the Symantec SORT Web site.

<https://sort.symantec.com>

Acronyms

The following table defines acronyms used in the Veritas Dynamic Multi-Pathing for Windows (DMPW) release notes:

Table 1-1 Acronym List

| Acronym | Definition |
|---------|-----------------------------------|
| DMPW | Dynamic Multi-Pathing for Windows |
| CLI | Command-line interface |
| GUI | Graphical user interface |
| HCL | Hardware Compatibility List |
| MPIO | Multipath I/O |
| VEA | Veritas Enterprise Administrator |
