

The Symantec High Availability Console can be installed using the installation wizard.

The following checklist provides the list of pre-requisites for installing the Symantec High Availability Console:

Installation on local machine	✓
Dedicated physical host or virtual machine (Do not install on a virtual machine that hosts VMware vCenter Server or a virtual machine that hosts VOM Console)	✓
User account has administrative privileges on local host	✓
No other console is registered with the vCenter Server under consideration	✓
Pop-up blockers are disabled on the local host	✓
No parallel installations, live updates, or Microsoft Windows updates in progress	✓
File and Printer Sharing is enabled on the local host	✓
Windows Management Instrumentation (WMI) service is running on the local host	✓
443/ https is enabled and VMware Web Service is running on the local host	✓
TCP ports 14151 to 14154, and 5634 are enabled on the local host for inbound and outbound communication	✓
