Footnotes:

1 - ApplicationHA and VCS products support additional application agents.
The support for applications is expanded through quarterly Agent Pack releases. See:
https://sort.veritas.com/agents
2 - On RHEL/OL 7, for SF Basic, support is available when you create a symbolic link under the Perl directory.
3 - Only a two-node SFCFSHA cluster is supported.
4 - For SFHA in host, KVM agent can be used. For SFHA in guest cluster, NSF must be used.
5 - For SFHA in RHEL H host, KVM agent (with DR capabilities) can be used. For SFHA in guest cluster, NSF must be used.
6- Up to eight-node cluster is supported.
7 - With RDM-P LUNs, disk-based fencing is supported with one guest per host per cluster basis.
With VMDK LUNs and multi-writer flag, NSF must be used. With SmartIO and FSS, vMotion is not supported.
8 - Supported on RHEL6 U5.
9 - Deduplicated data undeduplicates after NetBackup restore.
10 - Compressed data uncompresses after NetBackup restore
11- NetBackup VxVM/FlashSnap snapshot backup does not work with FSS volume.
12 - Write-back caching does not work during NetBackup restore.
