

Backup Exec 2014 Software Compatibility List (SCL)

Updated on November 14, 2016

Introduction

This document lists the available operating systems, platforms, and applications specifically supported by Symantec to be compatible with Backup Exec™ 2014.

The following guidelines regarding this Software Compatibility List (SCL) should be understood:

- **Symantec support of 3rd party manufacturer products:**

Symantec will cooperate with 3rd party vendors and attempt to assist in the diagnosis of problems found between the 3rd party products and Symantec products. Symantec Technical Support, for the combination of Symantec and 3rd party products listed in this document, is conditional on the 3rd party product being supported by the original manufacturer or vendor. If the original vendor has ceased providing support for a version of their product, Symantec also will no longer be able to provide support on that product in combination with our products.

- **Minor update version support:**

The contents of this document including 3rd party applications, databases, operating systems, in combination with Symantec products represent what has been tested in Symantec labs, or in Symantec-supervised partner labs, but is not intended to be a complete list of supported products and versions. Manufacturers of these products may frequently release minor version updates to their products as maintenance during their product's normal life cycle. (e.g. version 1.x.x.x) that may not be explicitly listed in this document. In these situations where the base or major version of the product is listed as supported in this document but the minor maintenance update is not, Symantec will provide "reasonable effort" support on these versions until specific testing of them has completed.

- **Not every combination of software and hardware has been tested:**

Symantec provides reasonable effort to qualify Backup Exec with as many different operating systems, service packs, hardware platforms, database application service packs, and other applications as possible. However, due to the number of combinations, it is not possible to test all combinations for compatibility. If a particular service pack or version is not listed as specifically supported by Symantec, it may work fine but it has not been explicitly tested by Symantec with Backup Exec and may not be eligible for support.

- **To request additions to this list:**

Software is selected and prioritized for certification based on market research and input from the field, including customer feedback. If a customer would like to have software considered for inclusion on this SCL, simply submit the request by email. [\[Send us an email request.\] <mailto:DL-SYMC-BackupExec_SCL@Symantec.com?subject=Backup Exec 2014 SCL - Customer Feedback>](mailto:DL-SYMC-BackupExec_SCL@Symantec.com?subject=Backup%20Exec%202014%20SCL%20-%20Customer%20Feedback) Requests will be reviewed by the appropriate Symantec Product Management team members for possible certification, with final decisions based on the overall fit with the product, target market, and frequency of request.

- **Alternative Configurations:**

Our Licensed Software is designed to interoperate with many types of systems, applications, and hardware. Sometimes a customer may choose to use our Licensed Software in an "**Alternative Configuration**", namely, an environment that has not been validated, approved, or verified to operate with our Licensed Software or which does not support such Licensed Software or only supports limited functionality. Symantec does not support Alternative Configurations, and we have no obligation to provide Support Services to Licensed Software in an Alternative Configuration. Symantec makes no warranty with respect to use of Licensed Software in an Alternative Configuration and any such use is at your own risk. A "**Supported Configuration**" might be converted into an Alternative Configuration where a vendor modifies one of its components that is part of the original Supported Configuration. As a consequence, your Licensed Software would then be operating in an Alternative Configuration. If you experience a problem with the Licensed Software in an Alternative Configuration or if your issue deals with script that was not developed by Symantec or an authorized consulting partner, then we may ask you to reproduce the problem in a Supported Configuration environment. Please note we have no obligation to attempt to resolve problems that cannot be replicated in a Supported Configuration. However, if the problem can be replicated in a Supported Configuration, we will investigate the problem in that Supported Configuration and attempt to resolve it. If the problem cannot be replicated in a Supported Configuration, then Symantec has no obligation to investigate or attempt to resolve the problem.

What's New

This document reflects updates for Backup Exec 2014 Service Pack 2 and newer: <http://www.symantec.com/docs/TECH225093>.

- Exchange 2013 CU8 is supported.
- OES 11 SP2 is supported.
- RHEL 6.6 RMAL is supported.
- RHEL 7 RMAL is supported.
- Enterprise Vault 11.0.1 is supported (SP1).
- ESXi 5.1 U3 is supported.
- vCenter Server 5.1 U3 is supported.
- vCenter Server Appliance 5.1 U3 is supported.

Minimum System Requirements

Items	Requirements
Operating System	<p>You cannot install a Backup Exec server on a computer that runs the Windows Server Core installation option of Windows Server 2008/2012. You can only install the Backup Exec Agent for Windows on Server Core computers.</p> <p>On the computers that run Windows 2003, ensure that those computers have Windows Imaging Component installed before you install Backup Exec 2014. Windows Imaging Component is required to install Backup Exec 2014.</p> <p>See the Microsoft website for more information on downloading and installing Windows Imaging Component.</p> <p>You cannot install SQL Express or SQL Server on a Windows Server 2008 computer that is configured in a Read Only Domain Controller (RODC) role. The Read Only Domain Controller role does not let you use the local accounts that are required for SQL Express and SQL Server. When you install Backup Exec on an RODC computer you must select a remote SQL instance for the Backup Exec Database.</p> <p>For Windows Server 2012 and later computers, you cannot install Backup Exec or the Agent for Windows on a volume that is enabled for deduplication in Windows or a ReFS volume.</p>
Additional application support	
Internet Browser	Internet Explorer 7.0 or later
Processor	Intel Pentium, Xeon, AMD, or compatible
Screen resolution	800 x 600
Default instance database repository	SQL Express 2008 R2 SP2
Memory	<p>Required: 1GB RAM above the operating system's requirements for the exclusive use by Backup Exec.</p> <p>Recommended: 2 GB RAM (or more for better performance)</p> <p>Note: RAM requirements may vary depending on the operations performed, the options installed, and the specific computer configuration.</p> <p>For the Central Admin Server Option: 1 GB RAM is required; 2 GB RAM is recommended.</p> <p>Symantec Recovery Disk: 1 GB minimum (dedicated) for the multi-lingual version.</p> <p>Virtual Memory Recommendations: 20 MB above the Windows recommended size for total paging file size (total for all disk volumes). Refer to your Microsoft Windows documentation for instructions on how to view or set the paging file size.</p> <p>For memory requirements for the Deduplication Option, you should review the topic 'Requirements for the Deduplication Option' in the Backup Exec 2014 Administrator's Guide.</p>

Items	Requirements
Installation disk space	<p>1.26 GB (Typical installation)</p> <p>1.91 GB (Includes all options)</p> <p>Note: Disk space requirements may vary depending on the operations performed, the options installed, and the specific system configuration. The Backup Exec Database and catalogs require additional space. An additional 525 MB is required for SQL Express. Any disk storage that you use also requires additional space.</p>
Other Hardware	<p>The following hardware is recommended:</p> <ul style="list-style-type: none"> • Network interface card or a virtual network adapter card • CD/DVD drive • A mouse
Storage Hardware	<p>You can use storage media drives, robotic libraries, removable storage devices, and non-removable hard drives.</p> <p>You can find a list of compatible types of storage at the following URL:</p> <p>http://entsupport.symantec.com/umi/V-269-2</p> <p>Support is available for the first drive in each robotic library when you purchase Backup Exec. To enable support for each additional robotic library drive, you must purchase the Backup Exec Library Expansion Option.</p>

Agent Operating System Compatibility

Agent for Windows Compatibility

Notes:

- Backup Exec 12.5, 2010, 2010 R2, 2010 R3, and 2012 Agents are backwards compatible with Backup Exec 2014 servers for the purpose of upgrades only. This configuration is not recommended or supported for extended periods. Every effort should be made to get all Backup Exec components to the same version as soon as possible.
- Any data that was previously backed up using the Intelligent Image Option can no longer be restored using Backup Exec 2014.

SUSE Linux Enterprise Server [1] [2] [5]	11	SP3	x86-32, x86-64
SUSE Linux Enterprise Server [2] [5] [6]	12		x86-64

1. Advanced Open File Option for Linux file system support includes ext2, ext3, ext4 and ReiserFS.
2. Backup Exec client-side deduplication is supported for 64-bit Linux systems.
3. File system support includes ext2, ext3, ext4, ReiserFS, JFS, and VxFS.
4. Supported with Open Enterprise Server (OES) 2.0 SP3, with Novell Storage Services (NSS) file system, NDS, GroupWise, and iFolder on 32-bit and 64-bit platforms for SUSE Linux Enterprise Server 10.

- 5. File system support includes ext2, ext3, and ext4.
- 6. Advanced Open File Option is not supported.

Agent for Mac Compatibility

- Notes:**
- Single sign-on accounts for OS X are not supported. Local Linux accounts must be used for compatibility with Agent for Mac.

Apple

Name	Version	Service Pack	CPU Architecture
Mac OS X	10.5 (Leopard)	.8	x86-32, x86-64
Mac OS X [1] [2] [3]	10.6 (Snow Leopard)		x86-32, x86-64
Mac OS X	10.7 (Lion)		x86-64
Mac OS X	10.9 (Mavericks)	.2	x86-64

- 1. All Mac OS X 10.6 platforms are supported.
- 2. Includes support for 64-bit, which means the ability to run a 32-bit binary on a chipset that supports the 64-bit instruction set.
- 3. Workstation and Server

Remote Media Agent for Linux Compatibility

- The Advanced Open File feature for Remote Media Agent for Linux is supported only on select Red Hat Enterprise Linux (RHEL) and Novell SUSE Enterprise Linux Server (SLES) platforms. Please refer to the RHEL and SLES footnotes to identify the supported versions.

Agent for Applications and Databases Compatibility

Notes:

- The Backup Exec Agent for Oracle on Windows or Linux Servers does not support multiple Oracle database versions that are installed on the same computer.
- Advanced Disk-based Option off-host backups of clustered Exchange databases in Exchange 2007/Exchange 2010 Clustering solutions are not supported.
- Legacy mailbox backups are no longer supported with any version of Exchange. This functionality has been replaced by the Granular Recovery Technology (GRT) feature.
- Backup Exec 2014 Small Business Edition only supports Microsoft Exchange, Active Directory, SQL, Sharepoint, and Hyper-V. Any other application or database not specifically listed should be considered unsupported by Backup Exec Small Business Edition at this time.
- Backup Exec supports all editions of the Microsoft SQL Server versions even though they are not specifically listed.

Backup Exec Upgrade Compatibility

Upgrade and Rolling Upgrade Compatibility

Notes:

Features or requirements that are no longer supported by Backup Exec may affect your ability to restore backed-up resources. Please review the section titled 'Features or requirements no longer supported by Backup Exec' in this document, or in this technote: <http://www.symantec.com/docs/TECH178552>

Direct upgrade to Backup Exec 2014

Name	Version	Service Pack
Backup Exec for Windows Server [1]	12.5	All Service Packs
Backup Exec for Windows Servers	2010	All Service Packs
Backup Exec for Windows Servers	2010 R2	All Service Packs
Backup Exec for Windows Servers	2010 R3	All Service Packs
Backup Exec	2012	All Service Packs

1. To upgrade versions of Backup Exec prior to 12.5 to Backup Exec 2014, you must first upgrade to Backup Exec 12.5/2010/2012.

Agent versions that can be temporarily used with Backup Exec 2014

Name	Version	Service Pack
Backup Exec for Windows Servers [1]	12.5	All Service Packs
Backup Exec for Windows Servers [1]	2010	All Service Packs
Backup Exec for Windows Servers [1]	2010 R2	All Service Packs
Backup Exec for Windows Servers [1]	2010 R3	All Service Packs
Backup Exec [1]	2012	All Service Packs

1. You can use previous versions of an Agent with Backup Exec during a rolling upgrade. A warning message is displayed in the job log when previous versions of an Agent are used, but backups and restores can continue normally. New features are disabled until you upgrade the Agent to the same version as the Backup Exec

server.

Temporarily Manage Backup Exec Servers with Backup Exec 2014

Name	Version	Service Pack
Backup Exec for Windows Servers [1]	2010 R3	SP3
Backup Exec for Windows Servers [1]	2010 R3	SP4
Backup Exec [1]	2012	SP2
Backup Exec [1]	2012	SP3
Backup Exec [1]	2012	SP4 + Hotfix 215906

1. You can perform rolling upgrades in the Backup Exec 2014 Central Admin Server Option (CASO) environment, which is included in the Enterprise Server Option. A rolling upgrade lets you upgrade the central administration server from the previous version to the current version first, and then upgrade the managed Backup Exec servers from the previous version to the current version over a period of time. A warning message is displayed in the job log when previous versions of a server are used, but backups and restores can continue normally. New features are disabled until you upgrade the version of all of the Backup Exec servers.

Backup Exec Feature Specific Compatibility

Simplified Disaster Recovery (SDR)

Notes:

- The Microsoft Assessment and Deployment Kit (ADK) is only supported on Windows Server 2008 SP2 and later.
- If the Backup Exec server does not run on Windows Server 2008 SP2 or later, the Standalone Create Disaster Recovery Disk Wizard needs to be installed on a different machine running 2008 SP2 or later. This wizard guides you through the download and installation of the ADK. You can then create the recovery disk by connecting to a remote Backup Exec server or locally with the default options. For further details and instructions <<http://www.symantec.com/docs/TECH211137>>
- The Agent for Linux, Remote Media Agent for Linux, and the Agent for Mac do not support the Simplified Disaster Recovery feature.
- If the Backup Exec server on which you want to create the Simplified Disaster Recovery disk image does not have an internet connection, and does not have ADK installed, instructions are provided on how to install the ADK. You can then use the Create Simplified Disaster Recovery Disk Wizard to create the recovery disk.

Convert to Virtual

Notes:

- The Convert to Virtual feature supports both Hyper-V and VMware ESX environments.
- Windows Server 2008 SP2 is not supported as a target Hyper-V host for the virtual machine. The target machine must be running Windows Server 2008 R2, or later.
- For the Convert to Virtual feature, conversion of Fibre Channel disk devices (not used as Windows volumes), USB devices, Removable disks, and ISCSI disks are not supported. Both Hyper-V and VMware have these limitations.
- VMware Converter does not convert GPT disks.
- Only basic disks are supported for conversion for both Hyper-V and VMware ESX environments.

Notes:

- File system archiving cannot be done from the Windows 2008 SP2 cluster shares. However, it can be done from the Windows 2008 R2 cluster shares.
- Exchange Mailbox Archiving Option cannot be installed on the Windows Small Business Server or on the Exchange Server.
- Exchange mailbox archiving can be done from Exchange 2003, Exchange 2007, and Exchange 2010 SP3 servers.
- Archiving cannot be completed with backups created using Virtual Agents (Microsoft Hyper-V and Virtual Server Agents and Agent for VMware Virtual Infrastructure).

Backup Exec Database Compatibility

- This section represents the databases that Backup Exec can use as a repository.
- Backup Exec installs Microsoft SQL Server 2008 R2 Express with SP2 components.
- If you already have a compatible SQL instance running on your network, you can have Backup Exec use that instance.
- Following are compatible versions of SQL:

Name	Version	Service Pack
Microsoft SQL Server and Express	2005	SP4
Microsoft SQL Server and Express	2008	SP3
Microsoft SQL Server and Express	2008 R2	
Microsoft SQL Server and Express	2008 R2	SP1
Microsoft SQL Server and Express	2008 R2	SP2
Microsoft SQL Server and Express	2008 R2	SP3
Microsoft SQL Server and Express	2012	
Microsoft SQL Server and Express	2012	SP1
Microsoft SQL Server and Express	2012	SP2
Microsoft SQL Server and Express	2014	

Backup Exec Management Command Line Interface

Note:

- BEMCLI is installed with Backup Exec and replaces BEMCMD.

Requirements to run BEMCLI:

- Windows PowerShell V2 or V3
- .NET 3.5 or 4.0
- PowerShell's execution policy must set to a value that is less restrictive than Restricted (e.g. AllSigned). For more information, see Get-Help Set-ExecutionPolicy.

Exchange GRT restore to PST file

This feature allows a user to restore directly to a PST file from a GRT enabled backup of a Exchange database. The PST file must use Outlook friendly mailbox folder structure of being beneath the 'Top of Information Store' only. Sub-folder below this level are not supported.

Outlook versions required on the target server:

- 32-bit Outlook 2007
- 32-bit Outlook 2010
- Outlook 2013 is not supported.
- 64-bit Outlook clients in any version are not supported.

File naming convention:

- Restore creates PST file name which matches mailbox display name in UI
- File name collisions handled with '(n)' suffix. IE: John Smith [John Smith].pst and John Smith [John Smith](1).pst

File size limits:

- Outlook 2007 has 20 GB limit
- The maximum size of the .PST file is 20 GB. If the restore exceeds the size limit, the data is spanned across multiple .PST files which are numbered consecutively.
- When you restore multiple mailboxes in the same job, each mailbox that you restore has a PST file.

32-bit and 64-bit Interoperability

Notes:

- The 32-bit Backup Exec server table illustrates interoperability between a 32-bit Backup Exec server and various remote systems and applications.
- The 64-bit Backup Exec server table illustrates interoperability between a 64-bit Backup Exec server and various remote systems and applications.
- If an agent or option is not listed in the tables below, it is supported on both 32-bit and 64-bit (64-bit) platforms.

1. Both 32-bit and 64-bit Backup Exec 2014 servers will back up 64-bit Domino server on a 64-bit OS. Note that a 32-bit Domino server installed on a 64-bit OS is also supported.
2. If Backup Exec resides on a 32-bit Windows 2003 installation, the Exchange tools must be installed locally to back up Exchange 2007. CDO must be installed on the Exchange server to run GRT backup and restore jobs.
3. SQL Server/Express 2008 32-bit and 64-bit versions are supported as database backend servers.
4. Both 32-bit and 64-bit SQL Server/Express 2005 are supported on Windows Server 2003 64-bit.

Cluster Support

For Windows operating systems, Backup Exec supports file share clusters for all supported versions and variations of Windows that feature cluster services (MSCS).

Note:

- File System Archiving cannot be done from the Windows 2008 cluster shares. Windows 2008 R2 cluster shares are required.

Name	Notes
Microsoft SQL Server 2005	Microsoft Cluster Server
Microsoft SQL Server 2008	Microsoft Cluster Server
Microsoft SQL Server 2008 R2	Microsoft Cluster Server
Microsoft SQL Server 2012	Microsoft Cluster Server

Name	Notes
IBM Domino 9	Microsoft Cluster Server
Oracle	Supported with RAC, Microsoft Cluster Server and FailSafe.

1. If Backup Exec resides on a 32-bit Windows 2003 installation, the Exchange tools must be installed locally to back up Exchange 2007. CDO must be installed on the Exchange server to run GRT backup and restore jobs.
2. Window Enterprise Edition is still required since a DAG (Database Availability Group) still uses pieces of Windows Failover Clustering.

End-of-Life information

Features and requirements no longer supported by Backup Exec

EOL Notice: These operating systems, backward compatibility for restores, and rolling upgrades, third-party software applications, and Symantec products are no longer supported for use with this version of Backup Exec for Windows.

- The Version EOL Started identifies the version of Backup Exec that no longer provides the support and includes all subsequent releases.
