	Upgradeable to latest version	U			
<p>NOTES: Support is conditional according to the Notes corresponding to the individual platform or application. See the Notes Reference for details</p>					
<p>All software configurations listed have been qualified with Veritas Cluster Server 5.1 for Windows.</p> <p>Due to the number of combinations, it is not possible to test all combinations for compatibility. If a particular service pack or version of an application is not listed as specifically tested by Symantec, it may work fine, but has not been explicitly tested with Veritas Cluster Server for Windows.</p> <p>Software applications that are not on the Veritas Cluster Server for Windows Software Compatibility List (SCL) are provided "commercially reasonable effort" support only. Commercially reasonable effort support allows for escalations based on unqualified software, but if a problem is determined to be software specific, the problem is not guaranteed to be resolved.</p> <p>Please subscribe to this document since the information in this document will be updated as necessary and subscribing will automatically notify you of any changes to it. In addition, if a particular platform is not currently listed as being supported, a request for additions to this list can be made through the Veritas Product Enhancement Web site:</p> <p>http://enhancement.veritas.com</p> <p>For a listing of 3rd Party Multipathing software supported please check the Storage Foundation and High Availability Solutions for Windows Hardware Compatibility List (HCL).</p>					
<p>Note 01: Support for Microsoft Logical Disk Manager and Network Appliance SnapDrive™, SnapMirror and SnapManager is available only with Veritas Cluster Server for Windows (VCSW). These technologies are not supported with Veritas Storage Foundation for Windows or Veritas Storage Foundation HA for Windows.</p>					
<p>Note 02: Veritas Cluster Server for Windows replaces Veritas Cluster for NetApp SnapMirror. It is a version of Veritas Cluster Server that supports storage management technologies other than SFW, such as Microsoft Logical Disk Manager and Network Appliance SnapDrive, SnapMirror. To utilize the integrated functionality between Storage Foundation for Windows and Veritas Cluster Server, the Storage Foundation HA (or HA/DR) for Windows bundle needs to be used. VCSW and SFW can't be used together if bought separately.</p>					
<p>Note 03: Requires 5.1 AP1 version of VCSW. For more information, see:</p> <p>32 bit 5.1 AP1: http://entsupport.symantec.com/docs/315675</p> <p>64 bit 5.1 AP1: http://entsupport.symantec.com/docs/315676</p>
