**Footnotes:**  
1- In-guest clustering support for VCS for:  
\* Hyper-V versions: Windows 2008 R2 Datacenter Edition and Windows Server 2012.  
\* OVM (x86) version: OVM (x86) Server 3.0.  
For more information, see *Veritas InfoScale Virtualization Guide on Linux*.  
2- The database support matrix will be updated based on the database certification program. See: <https://support.veritas.com>  
3- Support details will be included once certified by Oracle.  
4- Up to eight-node cluster is supported.  
5- VCS products support additional application agents.  
The support for applications is expanded through quarterly Agent Pack releases. See: <https://support.veritas.com/agentpack>  
6- For SFHA in host, KVM agent can be used. For SFHA in guest cluster, NSF must be used.  
7- For SFHA on RHEL H host, KVM agent (with DR capabilities) can be used. For SFHA in guest cluster, NSF must be used.  
8- For RDM-P LUNs, disk-based fencing is supported with one guest per host on per cluster basis.  
For VMXK LUNs and multi writer flag, NSF must be used.  
For SmartIO and FS, vMotion is not supported.  
9- Only a two-node SFCPSHA cluster is supported.
