Desktop and Laptop Option 9.0 Licensing Guide

Product Overview

With the majority of business-critical information residing outside the data centers or off of corporate servers, protection for desktops and laptops has become a necessity. The Veritas™ Desktop and Laptop Option is an easy-to-use solution which provides protection to the Windows® and Mac® desktops and laptops through reliable automated file backup and recovery.

Desktop and Laptop Option provides continuous, nonintrusive backup of files, regardless of whether a computer is connected to the network (corporate or public) or offline. When the computer is in the corporate network, files are protected by backing them up to a network user data folder. When the computer is not connected to the corporate network, files are backed up using the available internet connection. In case there is no available internet connection, files are backed up to a user data folder on the desktop. When the computer reconnects to the network, files are backed up from the local desktop user data folder to the designated network user data folder. Users who have multiple computers can synchronize the data between their computers so the most up-to-date file versions are available on all their computers.

Files can be backed up continuously, as per schedule, or manually ensuring safety and security of data stored on desktops and laptops. This data is protected and recoverable in the event of data loss or system failure. Additionally, Desktop and Laptop Option also provides quick access to the backed up files using a web browser and a mobile application. Once the user is authenticated, the backed up data can be downloaded to desktops, laptops, tablets, and mobile devices.

Desktop and Laptop Option supports file-level deduplication and content aware deduplication of Microsoft Outlook® PST and Lotus Notes® NSF files. Desktop and Laptop Option retains only one copy of a file or a PST/NSF attachment, which multiple users or computers may share. This process eliminates data duplication and increases efficiency in handling backup and storage.

Desktop and Laptop Option also provides the Administrator Dashboard which is an easy to interpret, real time interface that provides a graphical visualization of the endpoint backup environment from operational, deployment, and capacity planning perspectives. The routine administrative tasks can be delegated by creating multilevel administrators with restricted or full privileges.

Desktop and Laptop Option works with both NetBackup and Backup Exec environments.

Desktop and Laptop Option 9.0 Licensing Guide

Licensing Overview

Veritas Desktop and Laptop Option is licensed per user and is sold in packs of 10 or 100 licenses. You can mix and match packs to accommodate the amount of licenses needed.

Product	Licensed per	Details
