Only 30% of CIO's believe their business can recover from a disaster scenario.

Enterprises can’t afford to have mission-critical applications perform poorly – much less, have them down – for any period of time. But they also want the benefits of flexibility and scale that today's modern, multi-cloud architectures offer. Achieving both, cost-effectively, is possible, but only with Veritas.

ZERO DOWNTIME FOR ANY IT RESOURCE:

POINT SOLUTIONS CAN TYPICALLY INCREASE UPTIME LEVELS BY 10-15%.

SHIFTING IT LANDSCAPES: VIRTUAL, PHYSICAL, HYBRID AND MULTI-CLOUD INFRASTRUCTURES CAN MAKE ENSURING UPTIME LEVELS COMPLEX AND EXPENSIVE.

The Enterprise Data Services Platform offers solutions in the three areas that matter most: availability, protection, and insights. It’s the most versatile and extensible platform available to enterprises and represents the perfect IT foundation. It’s built on a NetBackup 8.2 core and supports 500+ data sources, 150+ storage targets and 60+ clouds—and it can be deployed in any form factor today.
