

VERITAS™

**Hewlett Packard
Enterprise**

Strategic Partnership Overview

Analytics-driven backup
and recovery delivered
on industry-leading
hybrid IT solutions.

Partnership at a Glance

Powerful solutions enable comprehensive data protection and ensure SLA delivery.

Veritas NetBackup™ has long been the preferred data backup and recovery solution for many enterprise IT departments, and that preference is no less prevalent among those who operate Hewlett Packard Enterprise (HPE) solutions in their data centers. Veritas and HPE are dedicated to ensuring enterprises can easily take advantage of complementary technologies that combine HPE's world-class storage hardware with powerful backup and recovery solutions from Veritas to deliver real business value.

Why choose Veritas and HPE?

Veritas and HPE share the common goal of simplifying IT operations with cost-effective solutions that generate measurable value. The Veritas and HPE partnership achieves this goal through tight integration across our joint solutions, including ongoing collaboration and testing to ensure quality now and in the future. Joint enterprise solutions from Veritas and HPE are multi-platform (physical and virtual) and multi-cloud (work with AWS and Azure) to provide integrated data protection across your hybrid IT infrastructure.

Customer Benefits

1. **Better Value**—Seamless integration ensures enhanced performance that is only available through a joint solution (1+1=3).
2. **Faster Backup and Recovery**—Our joint solutions provide faster backup and recovery, enabling customers to meet stricter service-level agreements (SLAs).
3. **Accurate Insights**—Gain visibility into your complete data infrastructure—on-premises and in any cloud—to make better-informed decisions.
4. **Cost-Effective**—More efficient use of backup resources reduces the total cost of ownership (TCO).

About Veritas

[Veritas Technologies](#) empowers businesses of all sizes to discover the truth in information. The Veritas platform enables you to accelerate digital transformation and solve pressing IT and business challenges, including multi-cloud data management, data protection, storage optimization, compliance readiness and workload portability. More than 80 percent of Fortune 500 companies rely on Veritas to reveal data insights that drive competitive advantage.

About HPE

Hewlett Packard Enterprise ([HPE](#)) is a global technology leader focused on developing intelligent storage solutions that enable customers to capture, analyze and act upon data seamlessly—from edge to cloud. HPE enables customers to accelerate business outcomes by driving new business models, creating new customer and employee experiences, and increasing operational efficiency.

Veritas and HPE Joint Solutions

Enterprise data backup and recovery optimized for hybrid IT.

Working with trusted partners like Veritas and HPE makes life simpler for every organization. Our close, long-time partnership gives HPE customers ready access to market-leading Veritas products like NetBackup, secure in the knowledge that our joint solutions have been tested and certified for the most efficient and effective interoperability.

Protecting data in StoreOnce environments

Transform backup and archiving into a genuine enabler for digital business growth with HPE StoreOnce and Veritas NetBackup.

- [HPE StoreOnce](#) data protection appliances integrate with [Veritas NetBackup](#) through the HPE StoreOnce OST plug-in. This plug-in allows NetBackup to move deduplicated data with high efficiency across the enterprise, from one StoreOnce system to another. This joint solution offers multiple advantages for backup-to-disk compared to traditional NAS and virtual tape interfaces.
- The combined Veritas NetBackup and HPE StoreOnce solution provides administrators with advanced capabilities such as Optimized Duplication, Granular Recovery Technology (GRT), Targeted and Classic Auto Image Replication (A.I.R.) and Accelerator for File System and VMware backups.
- Available APTARE IT Analytics™ software delivers full-stack insights, analytics and reporting for NetBackup with tracking and trending, real-time dashboards, future forecasting and predictive analysis of your entire enterprise data protection environments.
- Protect your application data by backing it up with Veritas NetBackup and HPE StoreOnce—one of the fastest ways to ensure an independent second copy of your data is available should your primary copy be lost or corrupted.

Protecting applications on Azure Stack

No matter how complex the environment, Veritas and HPE joint solutions deliver value and simplicity.

- With [HPE ProLiant for Microsoft Azure Stack](#), enterprises can deploy the right mix of private, public and traditional IT on an open platform that features Azure-consistent, software-defined infrastructure as a service (IaaS) and platform as a service (PaaS) on HPE data center hardware. Adding NetBackup and APTARE IT Analytics software further enhances enterprise data protection for Azure Cloud and HPE Azure Stack.
- NetBackup's Parallel Streaming Framework (PSF) provides the most efficient use of resources within an Azure Stack environment, which in turn enables customers to meet stricter SLAs through faster backups.
- Available APTARE IT Analytics software delivers actionable insights into your data to expose what's under-protected and over-protected to further mitigate risk and optimize backup resources.
- NetBackup integrates with HPE StoreOnce for more efficient movement of deduplicated data from Azure Stack VMs to HPE StoreOnce systems.
- For optional backup to the public cloud, HPE Cloud Bank Storage protects massive amounts of data at [20x](#) lower cost compared to existing public cloud services. Customers also enjoy cloud-aware, fast and reliable protection of data in Azure Stack environments while moving other data to Azure public cloud. NetBackup delivers a single, unified solution that eliminates the complexity of point solutions for physical and virtual infrastructure management. See the [Reference Architecture](#) for details.
