

Veritas NetBackup Appliances from Fujitsu

Transform your backup and archiving into a genuine enabler for digital business value

OVERVIEW

Veritas NetBackup Appliances offer a complete, turnkey backup solution that can be ready for production use in 30 minutes, putting you on the way to transforming your old, static backup investment into a critical tool for unlocking value from data. Greater visibility into your backup data gives you greater insight into how best to store and manage that data (for OpEx savings) and provides the necessary means to meet GDPR and other regulatory requirements.

This integrated data protection appliance can be used as a standalone, all-in-one solution or in combination with Fujitsu ETERNUS to complement your infrastructure with additional out-of-the box capabilities. In either case, NetBackup Appliances deliver high levels of automation and consistent, end-to-end system maintenance, making them easy to manage and inexpensive to operate.

CUSTOMER BENEFITS

- Quickly integrate market-leading technologies—setup takes less than 30 minutes
- Increase visibility into your data to generate greater insights and drive business value
- Address General Data Protection Regulation (GDPR) and other compliance requirements with confidence
- Increase efficiency, accelerate your ability to scale—no need to test and harmonize individual components
- Accelerate remote backups—up to 10 times faster
- Save money with intelligent and consistent deduplication that reduces backup volume by a factor of up to 50
- Put your trust in reliable, certified Fujitsu Services available globally

WHY CHOOSE VERITAS AND FUJITSU

An ecosystem for the entire data lifecycle

While appliances are often used throughout IT deployments, the concept is particularly advantageous in the case of backup and recovery. Appliances eliminate the need to acquire, install, configure, test, manage, patch, and support separate hardware and software from multiple vendors. Instead, organizations can simply install a NetBackup Appliance and have a backup and recovery solution with built-in deduplication up and running in minutes.

NetBackup Appliances—sold, installed, and serviced by Fujitsu—are suitable for any environment (capacity runs from 4 TB to nearly 1.4 PB), from remote office to enterprise data center. NetBackup Appliances can perform multiple functional roles as well: you can deploy them as master server, media server, or both. This flexibility makes it easy to expand or refresh existing backup environments without disrupting operations. With NetBackup Appliances, built-in application awareness for virtual environments and databases drives simplicity and efficiency while protecting your applications and host systems and easing co-management between backup owners and application owners. At the same time, automated optimization capabilities reduce load on your applications, network and host systems to save time, memory, bandwidth, and computational resources.

In a world where the complexity of data backup is always increasing—driven by the need to deal with a massive influx of data from multiple sources—NetBackup Appliances easily keep pace with multi-petabyte workloads like Hadoop® and NoSQL, as well as hyperconverged workloads like VDI with Nutanix™. NetBackup delivers instant recovery capabilities as-a-service with complete visibility and control into database environments like Oracle®. And applications like VMware® and Oracle also benefit from the ability to bring a copy of your data online from your backup (a 10 TB Oracle database can be started in 5 minutes).

Turn backup and archiving from burdensome expense into driver of value

When it comes to backup and archiving, Fujitsu has more than 50 years of experience and is one of the few IT providers able to give customers the comprehensive support they need. And Fujitsu knows that you don't just need the right technology; your success also depends on having just the right digital strategy for your business. That's why Fujitsu and Veritas work together as your reliable partner for IT infrastructure and can help you develop solutions that are perfectly tailored to meet your specific requirements.

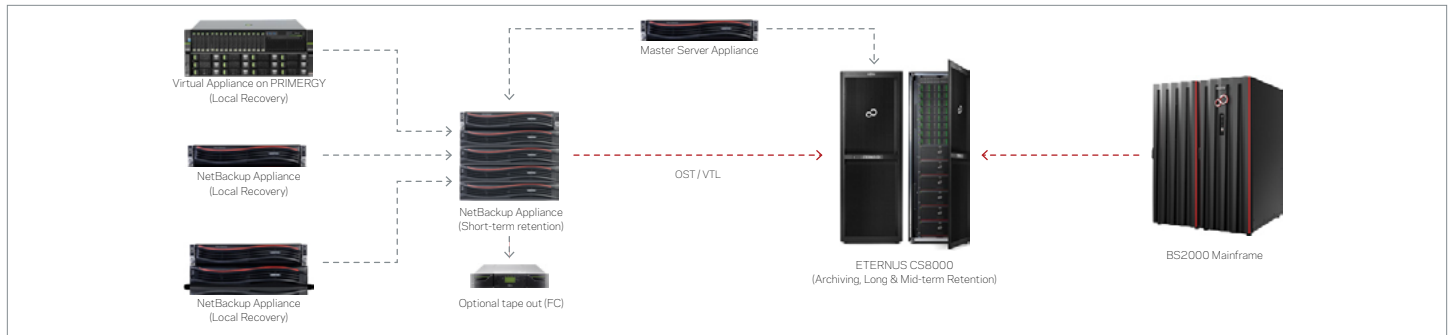

Figure : Fujitsu ETERNUS CS8000 and NetBackup Appliance play an important role in the data lifecycle.

KEY FEATURES

- Greater insights into your data and optimized support for GDPR requirements transform backup from a drain on expenses to a genuine driver of value
- Tight integration with the Veritas 360 Data Management strategy enables even greater insights into your data (and potential vulnerabilities) with Information Map, Resiliency Platform, Enterprise Vault, Access, Data Insight, and Velocity
- Seamlessly integrated software reduces the time and resources needed to design, test, deploy, patch, manage and maintain your backup infrastructure
- Embedded cybersecurity protects against intruders
- Software and appliance integration handles data directly on storage for replication, deduplication, mirroring, data copying, and tape migration
- Incremental 'forever' with synthetic 'full' backups are easily combined
- Data is automatically moved to the most appropriate media as criticality or value changes, balancing performance, capacity and costs according to the needs of the data and its users
- Virtual systems can be restarted directly from backup
- High rates of utilization ensure optimal return on investment (ROI)
