

Upgrade Documentation

Locate, download, and review target version documentation set

- [Upgrade Guide](#)
- [Appliance Upgrade Guide](#)
- [Release Notes](#)
- Late Breaking News
- [Feature-specific Administration Guides](#)
- [Consult SORT for Upgrade Checklists](#)
- Combine SORT checklist with the organization's NetBackup upgrade procedure documentation to reflect version-specific changes

Upgrade Preparation

Combine documentation with environment-specific needs

- Identify End-Of-Support-Life platforms
- Evaluate NetBackup Software [Compatibility List](#)
- Evaluate NetBackup Hardware [Compatibility List](#)
- Mitigate compatibility concerns in the upgrade plan
- Capture NBSU (NetBackup Support Utility)
- Perform a successful Full Catalog Backup
- Evaluate [different installer methods](#) available for each platform, including non-interactive installs and Deployment Policies for media servers and clients
- **NetBackup Appliances:** Download and execute AURA utility
- **NetBackup Appliances:** Check GA version + MR version [compatibility](#)
- **All Appliances:** Capture DataCollect output

Veritas Download Center

Base Installers & Hotfixes

- Identify the required base installers for OpsCenter (if applicable)
- Identify the required base installers for NetBackup Primary Server
- Identify the required base installers for NetBackup Media Server(s)
- Identify the required base installers for NetBackup Clients
- Download hotfix(es) for the target release that apply to the feature(s) in-use
- Identify any **Appliance GA+MR versions**
- [Download all identified packages](#)

Upgrade Execution

Apply expectations from documentation to upgrade execution

- Stage the software to the server(s)
- Upgrade OpsCenter first (if applicable)
- Upgrade Primary Server before any Media Servers
- Upgrade any User-interfaces (Java Console)
- Upgrade Media Servers before any NetBackup clients
- Upgrade NetBackup clients; [consider Deployment Policies \(VXupdate\)](#)
