

Top Reasons to Choose Veritas Alta Capture

Capture, archive, and discover all of today's relevant communications.

The IT landscape is changing quickly, with an estimated 70 percent of the workforce now hybrid remote. As more business communications take place over new channels, organizations need to capture and archive new content sources in addition to traditional email.

Veritas Alta™ Capture is the leading capture solution for the modern workforce across chat, file sharing, social media, financial platforms, mobile/SMS, collaboration, and voice channels directly from the source.

Top Five Reasons Veritas Alta Capture Provides Compliance Peace of Mind

1. The Need to Simplify and Automate the Capture of Content

Collaboration tools such as Slack, MS Teams, and WhatsApp not designed with the need to archive for compliance, eDiscovery, or corporate governance in mind. Native features that capture content vary dramatically by platform and complicate the process of meeting any record keeping and compliance requirements. Veritas Alta Capture was developed to simplify and automate the capture of all content, allowing you to use Veritas Alta™ Archiving or Veritas Alta™ eDiscovery to capture more than 120 content sources.

2. Address How to Archive All Collaboration Content if Subject to Regulatory Data Retention Requirements

There's one basic but important fact many IT professionals aren't aware of: All data is potentially discoverable in litigation or compliance challenges. Government regulations such as SEC Rule 17, FINRA, and MiFID II address how to archive content in a compliant fashion. Similarly, organizations regulated by HIPAA must put appropriate policies in place to protect confidential patient information communicated via email or any collaboration tools. If your organization has data retention, privacy requirements, or internal data governance policies, you must put appropriate measures in place that extend to collaboration, video, or chat tools.

3. Seamlessly Integrate with Veritas Alta Archiving and Veritas Alta eDiscovery

Veritas Alta Capture helps all types of organizations, including financial institutions, achieve quick compliance with regulatory and corporate governance requirements. Veritas Alta Capture is easy to set up and deploy in the cloud. Key functionality simplifies the capture of relevant content:

- Native capture—captures from more than 120 content sources via native APIs
- Message threading—pulls the whole conversation, consisting of many interactions, into one archivable item
- Capture filtering—configures content sources capture based on a date range to optimize initial capture operations
- Simplified management—allows you to easily manage and monitor all of your Veritas Alta Capture data sources from Veritas Alta Archiving

4. Reduce Compliance-Related Costs and Avoid Regulatory Fines

The need to capture and classify all communication for regulated industries is difficult. Today, most collaboration tools don't have their own storage repository, but instead store data in several other services. In the case of Microsoft Teams, for example, the storage repositories are within several other Microsoft 365 services. Capturing all relevant content is extremely cumbersome, time-consuming, and expensive. Veritas Alta Capture automates the content capture process of all relevant data into one or multiple archives based on preset custom requirements in a defensible and auditable manner.

5. Mitigate Risk Involving Internal Investigations, External Audits, and Lawsuits

On average, companies use 88 applications to power daily workflows—a 21 percent increase from three years ago. Government regulations, litigation, eDiscovery, and internal investigations require records of these communications. Veritas Alta Capture easily captures and archives all relevant conversations into your existing infrastructure in a defensible and auditable way.
