Kyndryl Cyber Incident Recovery

Cybercriminals are out in force. These individuals aim to extort organizations and cause disruption. There are many headlines proclaiming security breaches, and organizations have undeniably intensified the need to protect their company. Kyndryl's cyber resilience approach helps organizations anticipate, protect against, withstand, and recover from adverse conditions, stresses, attacks and compromises of cyber-enabled services.

Veritas and Kyndryl cyber resilience solutions deliver the components of a wide-ranging cyber readiness, response, and recovery program. Kyndryl's cyber recovery solution integrates with the Veritas data protection platform. The outcome is a unified solution that isolates data from production environments for enhanced security against cyberattacks, reducing the risk of data being altered, deleted, or encrypted.

> "
> *Simply having an incident response retainer in place, having a CISO, or employing security by design is not enough for an organization to consider itself incident ready [1]."*

As a best practice, Veritas and Kyndryl recommend building and maintaining a comprehensive multilayered data protection strategy that integrates layers of the NIST framework (protect, detect, and recover) to combat unexpected security breaches.

Veritas and Kyndryl have created unique value by combining their expertise in cyber resilience, enterprise applications such as SAP, and public cloud to deliver an integrated management solution. Together, they provide complete management of enterprise systems with built-in security, data protection, and cyber resilience. With Kyndryl's experience managing security and large enterprise environments, and Veritas providing protection of mission-critical data and business operations, orchestration of data and critical business recovery is fast and efficient.

Incident response services on the market today do not include recovery actions. Kyndryl Cyber Incident Recovery, powered by Veritas, will help you fortify all critical and valuable data, detect potential ransomware threats, and ensure orchestrated and automated recovery, so you are up and running quickly.

Veritas and Kyndryl automate and orchestrate recovery at any level—from data to application to an entire data center. Look to Veritas and Kyndryl for your ransomware resiliency strategy.

Benefits include:

- A unified solution integrating heterogeneous technologies such as operating systems, storage arrays and Backup/DR solutions, and multi cloud

- Automated and orchestrated recovery using Kyndryl Resiliency Orchestration workflows for quicker recovery

- Malware detection using built-in Resiliency Orchestration anomaly detection or third-party tools

- Cost-competitive and flexible by reusing existing hardware or cloud resources

- Synergy savings by using existing disaster recovery sites or third-party data centers

Together, Veritas and Kyndryl bolster your cyber resilience with proactive protection of your data, AI-driven detection of threats, and industry-leading rapid recovery at scale, enabling you to reduce risk, eliminate uncertainty, and maintain control of your most important asset—your data.

About the Veritas Kyndryl Strategic Partnership

Veritas, a leader in multi-cloud data management and Kyndryl, the world's largest IT infrastructure services provider, share a commitment to helping organizations manage their growing data estates as they transition to the cloud. Therefore, we are expanding our global alliance to help enterprises protect and recover their critical data across multi-cloud environments. By leveraging the innovation in data management of Veritas and the cyber resilience portfolio of Kyndryl, the world's largest organizations can manage and protect their data in the most efficient way. The partnership with Veritas extends Kyndryl's framework of cyber resilience services and solutions, including security assurance, zero trust, security operations and response, and incident recovery.
