

Case Study – Concrete Road Holdings (Ireland)

Backup and Archiving

Concrete Road Holdings (CRH), is a leading global building materials group employing over 90,000 people at around 4,000 locations worldwide. CRH provides building materials across the spectrum of the construction industry – from building foundations to frame and roofing, to fitting out the interior space and improving the exterior environment, on site works and infrastructural projects. They are the largest manufacturer of cement in the world, and recently purchased one of the largest competitors, Lefarge.

Solution

CRH are an Irish company, with their head office in Dublin. In 2014 they outsourced their Dublin head office, and global operations, to Fujitsu Ireland.

As part of this outsourcing project Veritas provided backup and archiving technology to Fujitsu to assist them in managing large data pools, and reducing data stored on disc.

Veritas Netbackup now protects all of CRH's critical data at their Dublin head office, and Veritas Enterprise Vault archives their Microsoft Exchange e-mail data.

Veritas Products that formed part of the solution:

- ▶ Enterprise Vault for Microsoft Exchange
- ▶ Netbackup

Value

Solution Size: 90Tb of data protected through NetBackup Technology

Veritas backup and archiving software has allowed CRH to standardise their IT operations in Dublin. The per-TB licensing model for Netbackup simplified the migration of Lefarge data to CRH, as Fujitsu simply purchased more capacity and transferred the Lefarge data to their datacentre.

This simple model has ensured that both CRH and Fujitsu gain best value and drive better utilisation of their data protection technology.
