# NetBackup™ SaaS Protection Microsoft Teams Backup

## Teams API-based data protection and archiving with Veritas.

Organizations want the extra safeguard of a secure, segregated backup of their cloud data from software as a service (SaaS) applications like Microsoft Teams. With more people working remotely and an increase in online collaboration, this protection is more important now than ever.

## How Veritas NetBackup SaaS Protection works for Microsoft Teams

Veritas runs a fully-managed and dedicated backup and recovery environment, delivered as a service. Veritas NetBackup SaaS Protection connects to your Microsoft Teams workspace and routinely captures changes and additions on an hourly or nightly basis. The backup of your Microsoft Teams data is stored compressed and encrypted in the cloud region of your choice.

## Teams Discovery Tools

NetBackup SaaS Protection's Content Indexer creates a near-real-time index of your Microsoft Teams—teams, channels, and messages—that unlocks powerful capabilities to search and govern your data you won't find anywhere else.

- Search by user, channel, or team across multiple sources.
- Make use of extended attributes to apply legal holds on channels, threads, or users, for example.
- Generate logical boundaries within a data stream to govern user permissions for discovery.

## Legal Holds

Place legal holds by channel, user, or results of a search query. Configure the legal hold policy to meet your organization's needs. Visualize all held data with dashboards and a built-in content browser.

## Reliable Backup

Seamless integration with Microsoft Teams APIs easily maintains a synthetic full backup of your data. Your data can be in a separate backup datastore or included as part of a backup of all your Microsoft 365 data.

## Fast Recovery

Fast and flexible recovery allows you to easily restore data back to Microsoft Teams or export it elsewhere.

## Full Conrol

You set your backup policies and permissions as well as the hosting cloud region, giving you full data residency control.

## Enterprise Security

Get secure storage for your backup data residing in a dedicated, SOC 2—compliant instance of the Veritas cloud data management platform using end-to-end encryption.

## Scalable Indexing

Automatic content indexing makes your searches run at blazing speeds. NetBackup SaaS Protection makes the full content of channels, chats, and threads searchable, including images, audio, and video data.

## See Why Veritas Is The Leading Option For Enterprise Teams Workspaces

NetBackup SaaS Protection provides enterprise-grade features, scalability, compliance, and security.

| | Alternatives | Veritas for Teams |
|---|:---:|:---:|
| Define a global backup policy for Teams workspaces or set policies per workspace | ✕ | ✓ |
| Unlimited backup retention | ✕ | ✓ |
| Automatic, fully-managed backup service | ✕ | ✓ |
| Restore to original or alternative workspace | ✕ | ✓ |
| Point-in-time restores | ✕ | ✓ |
| Support for Teams Standard Plans, Teams Plus Plans, and Teams Enterprise Plans | ✕ | ✓ |
| Captures channels, groups, user lists, direct messages, multi-party DMs, files, snippets, and posts | ✕ | ✓ |
| Content indexing with discovery search, legal hold, and retention period controls | ✕ | ✓ |
| Dedicated backup environment with data residency option for 22 countries | ✕ | ✓ |
| SOC 2 Type II compliance | ✕ | ✓ |

**About Veritas**

Veritas Technologies is a global leader in data protection and availability. Over 80,000 customers—including 87 percent of the Fortune Global 500—rely on us to abstract IT complexity and simplify data management. The Veritas Enterprise Data Services Platform automates the protection and orchestrates the recovery of data everywhere it lives, ensures 24/7 availability of business-critical applications, and provides enterprises with the insights they need to comply with evolving data regulations. With a reputation for reliability at scale and a deployment model to fit any need, Veritas Enterprise Data Services Platform supports more than 800 different data sources, over 100 different operating systems, more than 1,400 storage targets, and more than 60 different cloud platforms.
