

NetBackup SaaS Protection Google Workspace Data Backup

Google Workspace backup that scales to deliver reliable protection.

The biggest threats to your data in Google Workspace are ransomware and accidental—or malicious—deletion by users. Veritas NetBackup™ SaaS Protection provides the resiliency and certainty of knowing you can recover from all data loss scenarios.

Veritas Has Your Google Workspace Covered

Protect the full range of data stored across Google Workspace, including Gmail inboxes and all data stored in Google Drives—Docs, Sheets, and other formats.

NetBackup SaaS Protection delivers Google Workspace backup as a service (BaaS)

with Google API integration running in the cloud region(s) of your choice, giving you security and data residency control without the need to manage it yourself.

Protect and Recover from Data Loss with Ease

Scale across regions and domains, back up continuously, and deliver the performance that ensures your backup never falls behind.

Reliable Backup

Seamless integration with the Google Workspace APIs easily maintains a synthetic full backup of your data. Perform bulk backup of entire Google Workspace data stores.

Back Up Your Metadata, too

In addition to backing up mailboxes and files, NetBackup SaaS Protection also captures—and can restore—important metadata, including labels and permissions.

Instant, Flexible Recovery

Restore data at granular and bulk levels to the original or alternate locations. Use recovery to restore inboxes—including all folders, labels, and attachments—and shared Google Drive collections. For Google Drive, NetBackup SaaS Protection offers full support for Google Docs, Sheets, Slides, Drawings, and Scripts.

Full Control

You set your backup policies and permissions as well as the hosting cloud region, giving you full data residency control and making compliance with data sovereignty regulations simple. Rapidly export search results in the event of a legal discovery request or compliance audit.

Enterprise Security

Get secure storage for your backup data residing in a dedicated, SOC 2–compliant instance of the Veritas Enterprise Data Management Platform using end-to-end encryption, multifactor authentication, and enhanced, granular, role-based access control (RBAC).

Enterprise Scalability

Google Workspace environments can grow to be very large, so you need a data protection solution that scales with your organization. NetBackup SaaS Protection backup storage can grow as large as needed and easily scales to multiple petabytes and billions of objects.

Sleep Better at Night Knowing

- Your data is being protected by a backup you own
- You have unlimited retention and full access to your backup
- Your data is encrypted in transit and at rest, and only you can access it

See How Veritas Delivers Leading Google Workspace Data Protection

Backup Coverage	Recovery Options	Security	Platform
Gmail mailboxes	Granular restore	Immutable storage	Software as a service (SaaS)
Google Drive folders	Bulk restore	IP allow/deny lists	Data residency controls
Continuous backup	Point-in-time restore	End-to-end encryption	Flexible deployment options
Petabyte scalability	Choice of restore locations	Multifactor authentication	Multi-region support
Unlimited data retention	Package data for export	Enhanced role-based access control (RBAC)	Multi-domain support
