# Veritas Alta SaaS Protection Microsoft Teams Backup

Teams API-based data protection and archiving with Veritas.

Organizations want the extra safeguard of a secure, segregated backup of their cloud data from software as a service (SaaS) applications like Microsoft Teams. With more people working remotely and an increase in online collaboration, this protection is more important now than ever.

How Veritas Alta SaaS Protection works for Microsoft Teams

Veritas runs a fully-managed and dedicated backup and recovery environment, delivered as a service. Veritas Alta™ SaaS Protection (formerly known as NetBackup SaaS Protection) connects to your Microsoft Teams workspace and routinely captures changes and additions on an hourly or nightly basis. The backup of your Microsoft Teams data is stored compressed and encrypted in the cloud region of your choice.

Teams Discovery Tools

Veritas Alta SaaS Protection's Content Indexer creates a near-real-time index of your Microsoft Teams—teams, channels, and messages—that unlocks powerful capabilities to search and govern your data you won't find anywhere else.

- Search by user, channel, or team across multiple sources.
- Make use of extended attributes to apply legal holds on channels, threads, or users, for example.
- Generate logical boundaries within a data stream to govern user permissions for discovery.

Legal Holds

Place legal holds by channel, user, or results of a search query. Configure the legal hold policy to meet your organization's needs. Visualize all held data with dashboards and a built-in content browser.

Reliable Backup

Seamless integration with the recently-released new Microsoft Teams Export API easily maintains a synthetic full backup of your data. Your data can be in a separate backup datastore or included as part of a backup of all your Microsoft 365 data.

Fast Recovery

Fast and flexible recovery allows you to easily restore data back to Microsoft Teams or export it elsewhere.

Full Control

You set your backup policies and permissions as well as the hosting cloud region, giving you full data residency control.

Enterprise Security

Get secure storage for your backup data residing in a dedicated, SOC 2 Type II—compliant instance of the Veritas cloud data management platform using end-to-end encryption.

Scalable Indexing

Automatic content indexing makes your searches run at blazing speeds. Veritas Alta SaaS Protection makes the full content of channels, chats, and threads searchable.

About Veritas

Veritas Technologies is a leader in multi-cloud data management. Over 80,000 customers—including 95 percent of the Fortune 100—rely on Veritas to help ensure the protection, recoverability, and compliance of their data. Veritas has a reputation for reliability at scale, which delivers the resilience its customers need against the disruptions threatened by cyberattacks, like ransomware. No other vendor is able to match the ability of Veritas to execute, with support for 800+ data sources, 100+ operating systems, 1,400+ storage targets, and 60+ clouds through a single, unified approach. Powered by Cloud Scale Technology, Veritas is delivering today on its strategy for Autonomous Data Management that reduces operational overhead while delivering greater value.
