Technical Support

Technical Support maintains support centers globally. All support services will be delivered in accordance with your support agreement and the then-current enterprise technical support policies. For information about our support offerings and how to contact Technical Support, visit our website:

<https://www.veritas.com/support>

You can manage your Veritas account information at the following URL:

<https://my.veritas.com>

If you have questions regarding an existing support agreement, please email the support agreement administration team for your region as follows:

Worldwide (except Japan)

CustomerCare@veritas.com

Japan

CustomerCare_Japan@veritas.com

Documentation

Make sure that you have the current version of the documentation. Each document displays the date of the last update on page 2. The latest documentation is available on the Veritas website:

<https://sort.veritas.com/documents>

Documentation feedback

Your feedback is important to us. Suggest improvements or report errors or omissions to the documentation. Include the document title, document version, chapter title, and section title of the text on which you are reporting. Send feedback to:

doc.feedback@veritas.com

You can also see documentation information or ask a question on the Veritas community site:

Veritas Services and Operations Readiness Tools (SORT)

Veritas Services and Operations Readiness Tools (SORT) is a website that provides information and tools to automate and simplify certain time-consuming administrative tasks. Depending on the product, SORT helps you prepare for installations and upgrades, identify risks in your datacenters, and improve operational efficiency. To see what services and tools SORT provides for your product, see the data sheet:

https://sort.veritas.com/data/support/SORT_Data_Sheet.pdf

Adding Agentless hosts to the Management Server

This document includes the following topics:

- [Adding Agentless hosts to the Management Server](#)

Adding Agentless hosts to the Management Server

As a new functionality, you can also add an agentless host to the Management Server using **Profile**.

Before you add a managed agent host to the Management Server, make sure that the managed agent host can communicate with the Management Server.

To perform this task, your user group must be assigned the Admin role on the Management Server perspective. The root user can also perform this task.

To add an agentless host to Management Server

1. Install and Configure the Management Server.
Refer to the Veritas InfoScale™ 7.3 Operations Manager Installation and Configuration Guide.
2. In the Home page on the Management Server console, click **Settings**.
3. Do one of the following:
4.
 - Click **Add Hosts > Agentless**.
 - In the **Settings** tab click Host. Click **Add Hosts > Agentless**

5. In the **Add agentless hosts** wizard panel, enter the host details, and click **Finish**.
6. In the Result panel, verify that the host has been added successfully. Click **OK**.

To add multiple managed agentless hosts to Management Server using the CSV file, See [the section called “To add multiple managed agentless hosts to Management Server using the CSV file”](#) on page 5.

To add an agentless host to Management Server using Profile

1. Install and Configure the Management Server.
Refer to the Veritas InfoScale™ 7.3 Operations Manager Installation and Configuration Guide
2. On the Home page of the Management Server console, click **Settings**.
3. Click **Manage Profiles**.
4. In the **Add Profile** wizard panel, enter the **Profile Name**, **Username** and **Password**. Click **Close**.
5. Go to **Host**.
6. Do one of the following:
 - Click **Add Hosts > Agentless**.
 - In the **Settings** tab click Host. Click **Add Hosts > Agentless**.
7. In the **Add agentless hosts** wizard panel do the following:
 - Enter the **Host Name**.
 - Select the **Profile Name** which you created in step 4.
 - Enter the **SSH Port** (optional). The default value is 22.
See [“Add agentless hosts panel options using Profile”](#) on page 6.
8. Click **Finish**.
9. In the **Result** panel, verify that the host has been added successfully. Click **OK**.

To add multiple managed agentless hosts to Management Server using the CSV file

1. In the Home page on the Management Server console, click **Settings**.
2. Do one of the following:
 - Click **Add Hosts > Agents**.

- In the **Settings** tab click Host. Click **Add Hosts > Agentless**.
3. In the **Add agentless host** wizard panel, under **Advance**, click **Browse** to select the .csv file.
 4. Click **Import selected file** and click **Finish**.
 5. In the **Result** panel, verify that the host has been added successfully. Click **OK**.

Add agentless hosts panel options using Profile

Use this wizard panel to specify options to add a managed host to Management Server using agentless configuration.

The **Advanced** option lets you use privilege control software with the agentless discovery of a host. You must specify the type and location of the software on the remote host. The **Advanced** option is optional and is required when adding agentless host discovery for non-root users.

Table 1-1 Add agentless hosts using Profile wizard panel options for agentless configuration

Field	Description
Discovery Mode	Lets you filter the Control Host field by discovery mode. SSH should be used for adding UNIX hosts and WMI should be used for adding Windows hosts.
Control Host	Control Host through which the agentless host is being discovered. Windows agentless hosts can only be discovered by Windows Control Hosts.
Host Name	Enter host name or the IP address that you can use to reach the managed host from Management Server.
Profile Name	Allows you store the credentials for the agentless host.
SSH Port	Enter the Port. Note: The default value for the SSH port is 22. This port number is editable.

Table 1-1 Add agentless hosts using Profile wizard panel options for agentless configuration (*continued*)

Field	Description
Advanced	<p>Lets you specify type and location of privilege control software to use on the agentless hosts.</p> <p>The Advanced option lets you use privilege control software with the agentless discovery of a host. You must specify the type and location of the software on the remote host. The Advanced option is optional and is required when adding agentless host discovery for non-root users.</p>

Under **Advanced** you can add multiple hosts by importing the information from a comma-separated (.csv) file from a specified location. The CSV file must include the “.csv” extension. You can use the manual host specification and the CSV file simultaneously to add hosts.

The following is an example of a CSV file that includes user names and passwords for each host:

For Unix host

```
Host,User,Password,Port,Software,Softwarelocation
Host,Profile,Port,Software,Softwarelocation
```

Note: Port, Software, Softwarelocation are optional.

For Unix and Windows host

```
Host,User,Password
Host,Profile
```

The first line in the CSV file must appear as above. You can replace the subsequent lines with your hosts, user names, and passwords.

For agentless configuration, the CSV file cannot contain both UNIX and Windows hosts.

Note: The discovery mode (SSH or WMI) must be consistent with the types of hosts you specify in the CSV file. You must specify SSH for UNIX hosts and WMI for Windows hosts.
