

The winter 2019 release of Enterprise Vault.cloud will be rolled out across Veritas' global data centers during March 2019, during regularly-planned maintenance windows. Customers will be notified in advance that the service will not be available during this time.

WHAT'S NEW

Enhanced visibility into product usage and sync activity	Designated administrators will notice a new tabbed layout with an updated welcome and Archive Overview page when they log into the Administration console. The previous archive usage snapshot is still available by scrolling down on the Archive Usage page.
Click-to-acknowledge in-product usage alerts	Enterprise Vault.cloud offers you the flexibility of adding users as needed, even if you have to go above your currently licensed amount. You can always enable usage alert notifications, which will automatically send an email to you when you reach your specified user threshold. Now, if you are at or over your currently licensed amount, a screen will pop up when you login to the Administration console asking you to acknowledge that you are aware that your usage is above your currently licensed amount. Designated administrators will also receive an email notification asking them to login to the Administration console and acknowledge their usage.
Contact details section	This release includes the addition of a new window where you can add and edit contact details for your main administrator and billing/finance contacts. Please take a moment to login to your administration console, click on Account Management and confirm we have the correct contact information for you. This information will only be used in order to reach you with EV.cloud-related technical announcements.
Updated platform support	As part of the March release, we are also excited to announce support for Microsoft Outlook 2019, Active Directory Federation Service (ADFS) 4.0, and Multi-Factor Authentication (MFA). For more information, please consult the updated compatibility list .
