

Backup Exec 22 - 22.x Hardware and Cloud Storage Compatibility List (HCL)

Created on April 15, 2024

[Click here for the HTML version of this document. <https://download.veritas.com/resources/content/live/OSVC/100046000/100046609/en_US/be_22_hcl.html>](https://download.veritas.com/resources/content/live/OSVC/100046000/100046609/en_US/be_22_hcl.html)

Introduction

This Hardware Compatibility List (HCL) document contains information for all editions of Backup Exec 22. All hardware must be present on this HCL for support, unless a section clearly states that the devices listed are not the only devices supported (such as the Disk Target section). If your tape drive, tape library, or virtual tape library is not properly detected, please update your system using the latest Update (previously called a Feature Pack) before calling Support. Updating the drivers frequently resolves device related issues. This update can be found on our support site. <https://www.veritas.com/support/en_US/15047.html> Please see these links for information about how and where to obtain updates <https://www.veritas.com/content/support/en_US/article.100019916>

Backup Exec support policy is that all of the vendors involved (both hardware and software) must support all the pieces involved. For example, the Host Bus Adapter must be supported by the hardware vendor and the operating system vendor in order for Veritas to provide support. Always consult the hardware manufacturer's support list and the operating system vendor's support list when troubleshooting or planning a data protection installation. All entries were believed to be fully supported by all parties involved when they were added to this Veritas list, but if a vendor drops their support after this list was published, Veritas support will be on a reasonable-effort basis.

Hardware is selected and prioritized for certification based on market research and input from the field, including customer feedback. If a customer would like to have their hardware considered for inclusion on this HCL, simply submit the request via an email <Backup_Exec_HCL@veritas.com> . Requests will be reviewed by the appropriate Veritas Product Management team members for possible certification, with final decisions based on the overall fit with the product, target market, and frequency of request.

Some notes about drivers: Veritas Kernel-mode Tape drivers and tapeinst.exe are no longer installed if Backup Exec 22 is installed on Windows Server 2012 or later. There are no devices on this Backup Exec 22 Hardware Compatibility List (HCL) that require Veritas Kernel-mode drivers. USB tape devices still require a Microsoft or vendor Kernel-mode driver, in addition to the Veritas User-mode driver. Users of very old, unsupported, tape devices should investigate and test before using Windows Server 2012 or later to determine the functionality as kernel-mode drivers may be required. All supported tape devices are now accessed by Veritas User-mode drivers. Most tape devices have been accessed by User-mode drivers for multiple previous versions of Backup Exec.

User-mode drivers are not visible in the Windows Device Manager. When no Kernel-mode drivers are installed, the Windows Device Manager may show the tape drive with a yellow exclamation mark. This is acceptable and does NOT prevent the device from being used with Backup Exec and the User-mode drivers. Kernel-mode drivers from Microsoft or the tape hardware vendor are generally acceptable to be installed. Backup Exec will continue to access the tape devices via User-mode drivers.

Tapeinst.exe is the program that installs Veritas Kernel-mode tape class drivers. When using Windows Server 2012 or later, the ability to run the "Install Tape Device Drivers" wizard (under the Configure Storage menu) is no longer present and is not needed.

Some notes about tape drive block sizes: Please be sure to consult this technote when using tape drive block sizes above the 64KB default size. <https://www.veritas.com/content/support/en_US/article.100019307>

Alternative Configurations: Our Licensed Software is designed to interoperate with many types of systems, applications, and hardware. Sometimes a customer may choose to use our Licensed Software in an "**Alternative Configuration**", namely, an environment that has not been validated, approved or verified to operate with our Licensed Software or which does not support such Licensed Software or only supports limited functionality. In most cases, we do not support Alternative Configurations, and we have no obligation to provide Support Services to Licensed Software in an Alternative Configuration. Veritas makes no warranty with respect to use of Licensed Software in an Alternative Configuration and any such use is at your own risk. A "**Supported Configuration**" might be converted into an Alternative Configuration where a vendor modifies one of its components that is part of the original Supported Configuration. As a consequence, your Licensed Software would then be operating in an Alternative Configuration. If you experience a problem with the Licensed Software in an Alternative Configuration or if your issue deals with script that was not developed by Veritas or an authorized consulting partner, then we may ask you to reproduce the problem in a Supported Configuration environment. Please note we have no obligation to attempt to resolve problems that cannot be replicated in a Supported Configuration. However, if the problem can be replicated in a Supported Configuration, we will investigate the problem in that Supported Configuration and attempt to resolve it. If the problem cannot be replicated in a Supported Configuration, then we may elect not to work on that problem.

Configuring a tape device with a virtual machine is considered an "Alternative Configuration". For more details on the configuration of virtual machines with tape devices, see the following related articles:

<u>Newly-Supported Devices</u>	<u>Select hardware by BE option or agent</u>	<u>Cloud Storage</u>
<u>Disk Targets</u>	<u>Virtual Tape Libraries with Drives</u>	<u>Tape Drives</u>
<u>Tape Libraries with Drives</u>	<u>NDMP Platforms</u>	<u>NAS Sources</u>
<u>SAN Infrastructure Components</u>	<u>Retiring Soon</u>	<u>Support End-of-Life</u>

Newly-Supported Devices

The following new devices have been added to this HCL. See the device in its respective section, via bookmarks, for more details.

Veritas Update (previously LiveUpdate) will obtain the latest updates for your BE version.

Your device may require that you download and install an Update (previously called a Feature Pack), but it is RECOMMENDED that the latest patches are always used. If a new Update is utilized, it is required that Simplified Disaster Recovery (SDR) users regenerate the SDR boot media.

New NDMP Option components:

1. Dell EMC Unity Operating Environment 5.3

Added 2024-03-20:

New Backup-to-Disk | OpenStorage appliances:

1. Data Domain Appliance series and Virtual Edition with DDOS plugin v7.13

New NDMP Option components:

1. Dell EMC PowerStore 3.5

Added 2024-02-05:

New NDMP Option components:

1. Dell EMC PowerScale with OneFS v9.5

New Backup-to-cloud | S3 Cloud connector:

1. Amazon - Asia Pacific (Osaka)

Added 2024-01-12:

New tape libraries:

1. BDT MultiStor with LTO9 HH - FC and SAS
2. Fujitsu ETERNUS LT140 with LTO9 HH - FC and SAS

New OpenStorage appliances:

1. Fujitsu CS800 Reference Architecture with plug-in v11.0.0
2. Fujitsu ETERNUS CS800 M1 with plug-in v11.0.0

Added 2023-11-20:

New Backup-to-Disk | OpenStorage appliances:

1. Hewlett Packard Enterprise StoreOnce Appliance series and Virtual Edition with plugin 4.4 with WORM

New Backup-to-cloud | S3 Cloud connector:

1. Iron Mountain Cloud Secure Offline Storage

Added 2023-09-01:

New Backup-to-Disk | OpenStorage appliances:

1. Data Domain Appliance series and Virtual Edition with DDOS plugin v7.12

Added 2023-08-18:

New NDMP Option components:

1. Dell EMC Unity Operating Environment 5.2

Added 2023-08-07:

New Backup-to-cloud | S3 Cloud connector:

1. SCloud US3 Storage Services
2. Impossible Cloud Storage
3. Glacier Instant Retrieval (IR) - AWS Global and AWS GovCloud
4. Wasabi Hot Cloud Storage with S3 Object Lock

New NDMP Option components:

1. Dell EMC PowerStore 3.0
2. Hitachi NAS OS 14 NDMP for 4000 and 5000 series

Added 2023-07-17:

New Backup-to-Disk | OpenStorage appliances:

1. ExaGrid EX series with plug-in V11.5.0

Added 2023-05-09:

New Backup-to-Disk | OpenStorage appliances:

1. Data Domain Appliance series and Virtual Edition with DDOS plugin v7.11

Added 2023-04-14:

New tape libraries:

1. Overland Storage with LTO9 HH - SAS and FC

Added 2023-04-07:

New tape libraries:

1. Spectra Logic Spectra Stack with LTO9 HH - SAS and FC
2. Spectra Logic T-Series with LTO9 HH and FH - FC

Added 2023-03-10:

New Backup-to-cloud | S3 Cloud connector:

1. Google Cloud - Paris (EU-West9)
2. Google Cloud - Milan (EU-West8)
3. Google Cloud - Madrid (EU-Southwest1)
4. Google Cloud - Columbus (US-East5)
5. Google Cloud - Dallas (US-South1)
6. Amazon - Middle East (UAE)

Added 2023-01-27:

New Backup-to-Disk | OpenStorage appliances:

1. Data Domain Appliance series and Virtual Edition with DDOS plugin v7.10

Added 2022-12-15:

New OpenStorage appliances:

1. Quantum DXi series with plug-in v11.0.0 with WORM

New NDMP Option components:

1. Dell EMC PowerStore 3.2

Added 2022-12-07:

New tape libraries:

1. Dell EMC PowerVault LTO-9 SA - SAS

Added 2022-11-25:

New Backup-to-cloud | S3 Cloud connector

1. Exoscale Simple Object Storage

2. Backblaze B2 Cloud Storage

New tape libraries:

1. Oracle SL150 FC with IBM LTO9 HH - FC

Added 2022-10-07:

New NDMP Option components:

1. Dell EMC PowerScale with OneFS v9.4

2. Dell EMC Unity Operating Environment 5.1

3. NetApp FAS Series with ONTAP v9.10

Added 2022-09-30:

New Backup-to-cloud | S3 Cloud connector:

1. G42 Object Storage Service

Added 2022-09-29:

New Backup-to-cloud | S3 Cloud connector:

1. Wasabi Hot Cloud Storage

New tape libraries:

1. NEC LL009F with IBM LTO-9 HH - SAS

New Backup-to-Disk | OpenStorage appliances:

1. Data Domain Appliance series and Virtual Edition with DDOS plugin v7.9

New Backup-to-cloud | S3 Cloud connector:

1. Wasabi Hot Cloud Storage

Added 2022-08-09:

New OpenStorage appliances:

1. Quantum DXi series with plug-in v10.1.0

New NDMP Option components:

1. Dell EMC PowerStore 2.1

Added 2022-07-15:

New tape libraries:

1. NEC T280 (IBM TS4300) with IBM LTO-9 HH - SAS and FC

Added 2022-07-07:**New Backup-to-Disk | OpenStorage appliances:**

1. ExaGrid EX series with plug-in V11.4.1
2. Hewlett Packard Enterprise StoreOnce Appliance series and Virtual Edition with plugin 4.3

Added 2022-06-16:**New tape libraries:**

1. Dell EMC ML3 library with IBM LTO-9 FH - FC and SAS
2. Dell EMC ML3 library with IBM LTO-9 HH - FC and SAS

New NDMP Option components:

1. NetApp ONTAP Select with ONTAP v9.10

For details about Backup Exec 22 Update 2 (aka 22.2), please see <https://www.veritas.com/content/support/en_US/doc/59226813-160717569-0/v60224998-160717569> or <https://www.veritas.com/content/support/en_US/downloads/detail.REL156561> Released August 7, 2023.

For details about Backup Exec 22 Update 1 (aka 22.1), please see <https://www.veritas.com/content/support/en_US/doc/59226813-157325105-0/v60224998-157325105> or <https://www.veritas.com/content/support/en_US/downloads/detail.REL117815> Released March 6, 2023.

Select hardware by BE option or agent

The listed options and agents have hardware requirements. They are included here for the purpose of helping choose the appropriate hardware for the selected agent/option.

Advanced Disk-based Backup Option

The Advanced Disk-based Backup Option (ADBO, included with the Enterprise Server Option), as it relates to hardware devices in this HCL, can be seen in the [VSS Providers for Offhost backup](#) section.

Deduplication Option

The Deduplication Option support information is included with the Disk Targets sections. There are two basic options to choose from:

1. Backup Exec Deduplication Option Storage. To find tested devices, search by storage device vendor in the [Disk Targets | Disk Storage section](#), then model, then look for a check [✓] in the "dedup" column for tested disk devices.
2. Deduplication Appliance - sometimes referred to as OpenStorage devices from our hardware/software partners. See the [OST-Appliance section](#).

Simplified Disaster Recovery Option

The Simplified Disaster Recovery (SDR) Option is supported on tape libraries, tape drives, virtual tape libraries, and disk devices (present at system start time) unless otherwise mentioned in a footnote, or section header paragraph.

For compatibility information on physical tape libraries with SDR, please refer to the [Tape Libraries with Drives Section](#) of this document.

For compatibility information on virtual tape libraries (VTLs) with SDR, please refer to the [Virtual Tape Libraries with Drives Section](#) of this document.

For compatibility information on tape drives with SDR, please refer to the [Tape Drives Section](#) of this document.

NDMP Option

The storage devices supported by the NDMP option are included with the Tape Library / Virtual Tape Library sections. Please refer to the NDMP-specific notes in the "NDMP Platforms" section. These notes can be found as footnotes, per NDMP vendor / device combination. These notes apply to the "Virtual Tape Libraries with Drives" and "Tape Libraries with Drives Section" sections. Search by storage device vendor, then model, then look for a check [✓] in the NDMP column for support. Please note that the presence of a check means that Veritas will support the storage device and NDMP combination IF and ONLY IF the NDMP vendor also supports the library / drive combination. Please refer to the NDMP vendors' documentation for storage device support.

For compatibility information on NDMP platforms supported, please refer to the [NDMP Platforms Section](#) of this document.

For compatibility information on physical tape libraries with NDMP, please refer to the [Tape Libraries with Drives Section](#) of this document.

For compatibility information on virtual tape libraries (VTLs) with NDMP, please refer to the [Virtual Tape Libraries with Drives Section](#) of this document.

Remote Media Agent for Linux

The Remote Media Agent for Linux (RMAL) support information is included with the Tape Library / Virtual Tape Library / Tape Drives sections. Search by storage device vendor, then model, then look for a check [✓] in the RMAL column for support.

For compatibility information on physical tape libraries with RMAL, please refer to the [Tape Libraries with Drives Section](#) of this document.

For compatibility information on virtual tape libraries (VTLs) with RMAL, please refer to the [Virtual Tape Libraries with Drives Section](#) of this document.

For compatibility information on tape drives with RMAL, please refer to the [Tape Drives Section](#) of this document.

Enterprise Server Option for use with SAN shared storage

The SAN Shared Storage Option is now available as part of the Enterprise Server Option in Backup Exec 2012, Backup Exec 2014, Backup Exec 15, Backup Exec 16 Backup Exec 20, Backup Exec 21, & Backup Exec 22. All references to SSO on the HCL are now replaced with ESO due to the change. If you used the SAN Shared Storage Option in a previous version of Backup Exec, the SAN primary server will be upgraded to a Central Administration Server. SAN secondary servers will be upgraded to Managed Backup Exec Servers and will have the Managed Backup Exec Server option installed and the Unrestricted access to catalogs and backup sets for restore option selected.

The Enterprise Server Option (ESO) hardware support information is included with the Tape Library / Virtual Tape Library sections. Search by storage device vendor, then model, then look for a check [✓] in the ESO column for support.

For compatibility information on physical tape libraries with ESO, please refer to the [Tape Libraries with Drives Section](#) of this document.

For compatibility information on virtual tape libraries (VTLs) with ESO, please refer to the [Virtual Tape Libraries with Drives Section](#) of this document.

For compatibility information on storage area network (SAN) components with ESO, including fibre-channel and iSCSI components, please refer to the [SAN Infrastructure components Section](#) of this document.

Library Expansion Option

The Library Expansion Option (LEO) supported hardware configurations, including tape library and tape drive combinations, can be seen in the [Tape Libraries with Drives](#) section.

Virtual Tape Library Unlimited Drive Option

The Virtual Tape Library Unlimited Drive Option (VUDO) supported hardware configurations, including virtual tape library and virtual tape drive combinations, can be seen in the [Virtual Tape Libraries with Drives](#) section.

Often, a single VTL can be configured with a variable number of tape drives and tape libraries. VUDO allows for the variance in drives per physical VTL, not logical VTL. In other words, creating more than one logical VTL will require the need for multiple VUDO licenses.

Cloud Storage

Please see the "Best Practices for Using the Veritas Backup Exec Cloud Connector" at https://www.veritas.com/content/support/en_US/doc/72686287-152828427-0/v109847997-152828427

Backup Exec supports Cloud-based storage providers using a variety of technology methods, described below.

- 1) Azure Storage - This method uses the Backup Exec "Azure Cloud Connector" (a plugin included with Backup Exec). This target appears in Backup Exec with a Storage Type of "Cloud Storage".
- 2) S3 Storage - This method uses the Backup Exec "S3 Cloud Connector" (a plugin included with Backup Exec). This target appears in Backup Exec with a Storage Type of "Cloud Storage".
- 3) OST - This method uses a third-party Open Storage Technology plugin. This methods requires a Deduplication license in Backup Exec. This target appears in BE with a Storage Type of "OpenStorage".
- 4) Disk Targets - This method uses third-party hardware or software to make the cloud appear as a "regular" disk volume to Windows and Backup Exec. This target appears in Backup Exec with a Storage Type of "Disk storage".
- 5) VTL - This method uses third-party software to present the Cloud as if it was a VTL (Virtual Tape Library) to Windows and Backup Exec. A BE VUDO license is suggested. This target appears in Backup Exec with a Storage Type of "Robotic Library".
- 6) Cloud deduplication storage cannot be configured on containers that have immutable storage option or Object Lock enabled.
- 7) More information for cloud immutable (WORM) storage support can be found at https://www.veritas.com/content/support/en_US/doc/59226269-152612234-0/v151978295-152612234

Listed below are the supported and tested Cloud Storage solutions. Other Cloud Storage solutions may work, but it would be treated as an "Alternative Configuration". See this article for more information https://www.veritas.com/support/en_US/article.100039077 Cloud solutions are selected and prioritized for certification based on market research and input from the field, including customer feedback. If a customer would like to have their cloud and/or hardware considered for inclusion on this HCL, simply submit the request via an email Backup_Exec_HCL@veritas.com . Requests will be reviewed by the appropriate Veritas Product Management team members for possible certification, with final decisions based on the overall fit with the product, target market, and frequency of request.

Cloud Providers and Technology Methods

Cloud Provider	Technology method
Alibaba Cloud Object Storage Service (OSS)	Backup Exec S3 Cloud connector
Amazon Simple Storage Service (S3) Standard	Backup Exec S3 Cloud connector
Amazon Simple Storage Service (S3)Instant Retrieval	Backup Exec S3 Cloud connector
Amazon Simple Storage Service (S3) Standard	Riverbed Appliance
Amazon Simple Storage Service (S3) Standard	NetApp AltaVault
Amazon Simple Storage Service (S3) Standard and Glacier	Datish Systems OpenDedupe OST
Amazon Simple Storage Service (S3) Standard - Infrequent Access	Backup Exec S3 Cloud connector
Amazon Simple Storage Service (S3) One Zone Infrequent Access	Backup Exec S3 Cloud connector
Amazon Simple Storage Service (S3) Intelligent Tiering	Backup Exec S3 Cloud connector
Amazon Simple Storage Service (S3) Glacier	Backup Exec S3 Cloud connector

Cloud Providers and Technology Methods

Cloud Provider	Technology method
Amazon Simple Storage Service (S3) Glacier Deep Archive	Backup Exec S3 Cloud connector
Amazon Simple Storage Service and Glacier	Amazon AWS VTL
Amazon Web Services	Amazon Gateway-Cached Volume
Backblaze	Backup Exec S3-Compatible Cloud connector
Chunghwa Telecom hicloud S3	Backup Exec S3-Compatible Cloud connector
Cloudian HyperStore Object Storage	Backup Exec S3 Cloud connector
Dell EMC Elastic Cloud Storage (ECS)	Backup Exec S3 Cloud connector
DOCKS by PingUs	Backup Exec S3 Cloud connector
Exoscale	Backup Exec S3-Compatible Cloud connector
G42	Backup Exec S3-Compatible Cloud connector
Google Cloud Multi-Regional	Backup Exec S3 Cloud connector
Google Cloud Regional	Backup Exec S3 Cloud connector
Google Cloud Nearline	Backup Exec S3 Cloud connector
Google Cloud Coldline	Backup Exec S3 Cloud connector
Google Cloud Durable Reduced Availability (DRA)	Backup Exec S3 Cloud connector
Google Cloud Multi-Regional	Datish Systems OpenDedupе OST
Google Cloud Regional	Datish Systems OpenDedupе OST
Hewlett Packard Enterprise Cloud Volumes	HPE OST plugin
IBM Cloud Object Storage	Backup Exec S3-Compatible Cloud connector
Impossible Cloud Storage	Backup Exec S3-Compatible Cloud connector
Iron Mountain	Backup Exec S3-Compatible Cloud connector
Infoniqa SWISS3CLOUD	Backup Exec S3-Compatible Cloud connector
Microsoft Azure	Backup Exec Azure Cloud connector
Microsoft Azure	NetApp AltaVault
Microsoft Azure	Microsoft StorSimple
Microsoft Azure	Riverbed Appliance
Microsoft Azure	Datish Systems OpenDedupе OST
Microsoft Azure Archive	Datish Systems OpenDedupе OST
Private S3 Cloud Storage	Backup Exec S3 Cloud connector
Quantum Q-Cloud Protect for AWS	Quantum-provided OST plugin
RedHat Ceph Storage	Backup Exec S3 Cloud connector
Scality RING Storage	Backup Exec S3-Compatible Cloud connector

Cloud Providers and Technology Methods

Cloud Provider	Technology method
S3 Cloud US3 Storage Services	Backup Exec S3-Compatible Cloud connector
Tencent Cloud Object Storage	Backup Exec S3-Compatible Cloud connector
Telefonica Open Cloud	Backup Exec S3-Compatible Cloud connector
Veritas Access Storage	Backup Exec S3-Compatible Cloud connector
Wasabi	Backup Exec S3-Compatible Cloud connector

Azure Cloud

You can use the Azure Cloud Connector to back up data to Microsoft Azure cloud storage.

Microsoft

Cloud Storage Solution	Supported Regions	Supported Functionality
Azure [1] [2] [3]	All Locales	Cloud Deduplication, Object Lock
Azure China [1] [2]	All Locales	Cloud Deduplication
Azure Germany [1] [2]	All Locales	Cloud Deduplication
Azure Government [1] [2]	All US Gov Locales	Cloud Deduplication

- Hot-tier and cool-tier are supported.
- Backup Exec supports Azure-Blob Storage type only.
- Support for "Object Lock" requires BE 22.1 (or higher). See <https://www.veritas.com/content/support/en_US/doc/59226813-157325105-0/v60224998-157325105>

S3 Storage

You can use the S3 Cloud Connector to back up data to a supported S3-compatible cloud storage.

The below section lists the S3-compatible cloud storage solutions that are currently supported by Backup Exec 22 and the BE 22 Update (if any) that are required for support.

Alibaba Cloud

Cloud Storage Solution	Locales / Regions	Supported Functionality
Object Storage Service (OSS) [1]	All Locales	Cloud Deduplication

1. To configure this cloud storage for use with Backup Exec, see the following article

1. To configure this cloud storage for use with Backup Exec, see the following article <https://www.veritas.com/support/en_US/article.100038470>
2. To get started with AWS S3, go to the following link <<http://aws.amazon.com/s3>>
3. Transfer Acceleration for AWS S3 is not currently supported in BE
4. Support for the AWS Middle East (UAE) location requires BE 22.1 HF 957650, available at <https://www.veritas.com/content/support/en_US/downloads/update.UPD957650>
5. Support for the Sweden (Stockholm), Asia Pacific (Jakarta), Middle East (UAE) locations requires BE 22.2 HF 917391, available at <https://www.veritas.com/support/en_US/downloads/update.UPD917391>
6. Support for "Instant retrieval" storage tier for AWS Global requires BE 22.2 or later. See <https://www.veritas.com/content/support/en_US/doc/59226813-160717569-0/v60224998-160717569>
7. Support for "Instant retrieval" storage tier for AWS GovCloud requires BE 22.2 or later. See <https://www.veritas.com/content/support/en_US/doc/59226813-160717569-0/v60224998-160717569>

Backblaze

Cloud Storage Solution	Locales / Regions	Supported Functionality
B2 Cloud Storage [1] [2]	us-west-001 (US West)	Cloud Deduplication

1. To configure Backblaze cloud storage with Backup Exec, see the following article <<https://help.backblaze.com/hc/en-us/articles/6631156014619-Quickstart-Guide-for-Veritas-BackupExec-and-Backblaze-B2>>
2. The Provider Name "Compatible-with-S3-v4" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see <https://www.veritas.com/support/en_US/article.100039077>

Chunghwa Telecom

Cloud Storage Solution	Locales / Regions	Supported Functionality
hicloud S3 [1] [2]	All Locales	Cloud Deduplication

1. The Provider Name "Compatible-with-S3" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see <https://www.veritas.com/support/en_US/article.100039077>
2. Required certificate has been added BE 22.2 or later to add Chunghwa Telecom in BE. For prior BE releases we need to add certificate. Refer link to add certificate <https://www.veritas.com/support/en_US/article.100034293>

Cloudian

Cloud Storage Solution	Locales / Regions
Cloudian HyperStore Object Storage [1]	On-Premises

1. The Provider Name "Cloudian" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100038827.html

Dell EMC

Cloud Storage Solution	Locales / Regions	Supported Functionality
Dell EMC Elastic Cloud Storage (ECS) [1]	On-Premises	Cloud Deduplication

1. The Provider Name "emc-ecs" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100038827.html

DOCKS by PingUs

Cloud Storage Solution	Locales / Regions	Supported Functionality
DOCKS by PingUs [1]	On-Premises, All Locales	Cloud Deduplication

1. The Provider Name "Cloudian" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100038827.html

Exoscale

Cloud Storage Solution	Locales / Regions	Supported Functionality
Simple Object Storage [1]	de-fra-1 (Frankfurt), de-muc-1 (Munich), at-vie-1 (Vienna), ch-gva-2 (Geneva), ch-dk-2 (Zurich), bg-sof-1 (Sofia)	Cloud Deduplication

1. The Provider Name "Compatible-with-S3" and "Compatible-with-S3-v4" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077

G42

Cloud Storage Solution	Locales / Regions	Supported Functionality
Object Storage Service [1] [2]	ae-ad-1 (UAE-Abu Dhabi)	Cloud Deduplication

1. The Provider Name "Compatible-with-S3" and "Compatible-with-S3-v4" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see <https://www.veritas.com/support/en_US/article.100039077>

2. Cold Storage Tier is not supported with BE 22.

Google

Cloud Storage Solution	Supported Locations	Supported Functionality
Google Cloud Archive [1]	Asia, European Union, United States	Cloud Deduplication
Google Cloud Coldline [1]	Asia, European Union, United States	Cloud Deduplication
Google Cloud Dual-Region [1]	Asia (Asia-Northeast1 and Asia-Northeast2), European Union (EU-North1 and EU-West4), United States (US-Central1 and US-East1)	Cloud Deduplication
Google Cloud Durable Reduced Availability (DRA) [1]	Asia, European Union, United States	
Google Cloud Multi-Regional [1]	Asia, European Union, United States	Cloud Deduplication
Google Cloud Nearline [1]	Asia, European Union, United States	Cloud Deduplication
Google Cloud Regional [1]	US-Central1, US-East1, US-West1, US-East4, US-West2, Asia-East1, Asia-Northeast1, Asia-Southeast1, Australia-Southeast1, Asia-East2, Asia-South1, Asia-Northeast2, EU-North1, EU-West4, EU-West6, NorthAmerica-Northeast1, SouthAmerica-East1, Asia-Northeast3, US-West3, US-West4, Asia-Southeast2, EU-Central2, Australia-Southeast2, NorthAmerica-Northeast2, EU-West1, EU-West2, EU-West3, SouthAmerica-West1, EU-West9, EU-West8, EU-Southwest1, US-East5, US-South1, Asia-South2 [2] [3]	Cloud Deduplication

1. To configure this cloud storage for use with Backup Exec, see the following article <https://www.veritas.com/support/en_US/article.100031532>

2. Support for the EU-West9, EU-West8, EU-Southwest1, US-East5 and US-South1 locations requires BE 22.1 HF 957650, available at <https://www.veritas.com/content/support/en_US/downloads/update.UPD957650>

3. Support for the Asia-South2 locations requires BE 22.2 HF 917391, available at <https://www.veritas.com/support/en_US/downloads/update.UPD917391>

IBM

Cloud Storage Solution	Locales / Regions	Supported Functionality
Cloud Object Storage [1]	All Locales	Cloud Deduplication

1. The Provider Name "Compatible-with-S3" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077

Impossible Cloud

Cloud Storage Solution	Locales / Regions	Supported Functionality
Cloud Storage [1] [2]	us-west-1	Cloud Deduplication

1. Support for the Impossible Cloud Storage requires BE 22.2 or later. See https://www.veritas.com/content/support/en_US/doc/59226813-160717569-0/v60224998-160717569

2. The Provider Name "Compatible-with-S3" or "Compatible-with-S3-v4" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077 .

Infoniqa

Cloud Storage Solution	Locales / Regions
SWISS3CLOUD [1]	All Locales

1. The Provider Name "Compatible-with-S3" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077

Iron Mountain

Cloud Storage Solution	Locales / Regions	Supported Functionality
Secure Offline Storage [1] [2] [3]	us-east-1	Cloud Deduplication

1. Support for the Iron Mountain Secure Offline Storage requires BE 22.2 or later.

2. To configure Iron Mountain supported regions in Backup Exec 22.2. Refer https://www.veritas.com/content/support/en_US/article.100059075

3. The Provider Name "Compatible-with-S3-v4" and "Compatible-with-S3" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077 .

RedHat

Cloud Storage Solution	Locales / Regions
RedHat Ceph Storage [1]	On-Premises

1. The Provider Name "rhceph" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100038827.html

Scality

Cloud Storage Solution	Locales / Regions
Scality RING Storage [1]	On-Premises

1. The Provider Name "Compatible-with-S3" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077

SCloud

Cloud Storage Solution	Locales / Regions	Supported Functionality
US3 Storage Services [1] [2] [3]	sg (Singapore), vn-sng (Vietnam), idn-jakarta (Jarkarta), th-bkk (Bangkok)	Cloud Deduplication

1. Support for the SCloud US3 Storage Services requires BE 22.2 or later. See https://www.veritas.com/content/support/en_US/doc/59226813-160717569-0/v60224998-160717569
2. To configure SCloud supported regions in Backup Exec 22.2. Refer https://www.veritas.com/content/support/en_US/article.100059075
3. The Provider Name "Compatible-with-S3-v4" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077 .

Tencent

Cloud Storage Solution	Locales / Regions	Supported Functionality
Cloud Object Storage (COS) - Standard [1] [2]	All Locales	Cloud Deduplication

1. The Provider Name "Compatible-with-S3" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077

2. "COS Standard" is supported. "COS Standard IA", "COS Archive", and "COS Deep Archive" are not supported.

Telefonica

Cloud Storage Solution	Locales / Regions
Telefonica Open Cloud [1]	All Locales

1. The Provider Name "Compatible-with-S3" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077

Veritas

Cloud Storage Solution	Locales / Regions
Veritas Access Storage [1] [2]	On-Premises

1. The Provider Name "vtas-access" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077

2. All Veritas Access versions and form-factors are supported, including Veritas built appliances and other appliances.

Wasabi

Cloud Storage Solution	Locales / Regions	Supported Functionality
Hot Cloud Storage [1] [2] [3] [4] [5]	us-east-1 (N. Virginia), us-east-2 (N. Virginia), us-central-1 (Texas), us-west-1 (Oregon), ca-central-1 (Toronto), eu-central-1 (Amsterdam), ap-northeast-1 (Tokyo), ap-northeast-2 (Osaka), eu west-1 (London), eu-west-2 (Paris), ap-southeast-2 (Sydney), ap-southeast-1 (Singapore), eu-central-2 (Frankfurt)	Cloud Deduplication, S3 Object Lock

1. Refer the link https://www.veritas.com/support/en_US/article.100053909? to configure Wasabi cloud storage with Backup Exec 22.0

2. To configure Wasabi cloud storage with Backup Exec, see the following article <https://knowledgebase.wasabi.com/hc/en-us/articles/8685471665435-How-do-I-use-Veritas-Backup-Exec-with-Wasabi>

3. Wasabi Cloud Storage has been added as storage target in BE 22.1 or later releases.

4. Support for "S3 Object Lock" requires BE 22.2 or later. See https://www.veritas.com/content/support/en_US/doc/59226813-160717569-0/v60224998-160717569

5. The Provider Name "Compatible-with-S3" or "Compatible-with-S3-v4" will be required for creating Cloud Instance using bemcli. For steps on using bemcli to create a new cloud instance, please see https://www.veritas.com/support/en_US/article.100039077 .

OST

Backup Exec OpenStorage (OST) Cloud Storage plug-ins enable Veritas data protection applications to access Cloud Storage Solutions. Either the storage vendor or Veritas provides a software plug-in, which is installed on each Backup Exec server that is connected to the cloud solution. If you do not see OST support for your desired Cloud Storage Solution provider / Backup Exec Server OS platform, please contact that Storage Server appliance vendor to request OST support for that platform. Please see the Backup Exec System Administrator's Guide for more information on how to use OST.

Hewlett Packard Enterprise

Cloud Storage Solution	HPE Plug-in version	Windows Server 2012	Windows Server 2016	Windows Server 2019
Cloud Volumes [1] [2]	4.2	✓	✓	✓

1. For information on Cloud Volumes, go to [<https://demo.cloudvolumes.hpe.com/welcome/>](https://demo.cloudvolumes.hpe.com/welcome/)
2. See the [HPE OST appliance](#) section also

Disk Targets

The disk target software versions listed in this section are the minimum software levels that are supported. Where more than one software level is listed, this implies a newer version has been tested. The earlier software version is the minimum version required.

Cloud storage providers will be individually certified for use with Backup Exec, therefore, additional Cloud providers will be added as they are certified.

Amazon Web Services

Storage Gateway	Release Date	Connectivity	Virtualization Platform
Gateway-Cached Volume [1] [2] [3]	16-Dec-2014	iSCSI	VMware ESXi Microsoft Hyper-V [4]

1. The Gateway-Cached Volume is offered as a service and therefore specific software versions are not available. Please refer to release dates: [<http://aws.amazon.com/releasenotes/AWS-Storage-Gateway>](http://aws.amazon.com/releasenotes/AWS-Storage-Gateway)
2. Backup Exec Simplified Disaster Recovery (SDR) is not supported.
3. See the [Amazon Disk Targets](#) section also
4. Please refer to AWS documentation for hypervisor and host requirements: [<http://docs.aws.amazon.com/storagegateway/latest/userguide/Requirements.html>](http://docs.aws.amazon.com/storagegateway/latest/userguide/Requirements.html)

Microsoft StorSimple

Storage Gateway	Minimum Supported Version	Supported Cloud Providers	Connectivity	Virtualization Platform
8100/8600 [1] [2] [3]	StorSimple Update 3	Azure	iSCSI	VMware ESXi Microsoft Hyper-V

1. Please refer to MS documentation: <<https://docs.microsoft.com/en-us/azure/storsimple/storsimple-configure-backup-target-using-backup-exec>>
2. Backup Exec Simplified Disaster Recovery (SDR) is not supported.
3. See the [Microsoft Disk Targets](#) section also

NetApp

Family	Family Members	Software Tested	Supported Cloud Providers	Connectivity	Basic B2D	GRT Tested
AltaVault Appliance [1] [2] [3]	AVA-400, AVA-800	4.2.2	Amazon S3	CIFS	✓	✓

AltaVault Cloud Appliance [1] [2] [3]	AVA-c4, AVA-c8, AVA-c16	4.2.2	Amazon S3	CIFS	✓	✓

1. Backup Exec Simplified Disaster Recovery (SDR) is not supported. Refer to the AltaVault docs for recovery instructions.
2. NetApp AltaVault Cloud Integrated Storage Deployment Guide 4.0.1: <https://library.netapp.com/ecm/ecm_download_file/ECMP12510036>
3. See the [NetApp Disk Targets](#) section also

Riverbed

Family	Family Members	Software Tested	Supported Cloud Providers	Connectivity	Basic B2D	GRT Tested
SteelStore Appliance [1] [2] [3]	WWA730, WWA2030, WWA3030	SteelStore OS 3.0.2, 3.1.2a, 3.3	Amazon S3, Microsoft Azure	CIFS	✓	✓
SteelStore Virtual Appliance [1] [2] [3]	SteelStore Virtual 110, SteelStore Virtual 210, SteelStore Virtual 410, SteelStore Virtual 810, SteelStore Virtual 1610	SteelStore OS 3.1.1a, 3.1.2a, 3.3	Amazon S3, Microsoft Azure	CIFS	✓	✓
Whitewater Appliance [1] [2] [3]	WWA510, WWA710, WWA2010, WWA3010	SteelStore OS 3.0.2, 3.1.2a, 3.3	Amazon S3, Microsoft Azure	CIFS	✓	✓

1. Backup Exec Simplified Disaster Recovery (SDR) is not supported. Refer to the SteelStore docs for recovery instructions.
2. SteelStore Solution Guide: <<http://media-cms.riverbed.com/documents/Solution+Guide+-+SteelStore+with+Backup+Exec+3.1.1.pdf>>
3. See the [Riverbed Disk Targets](#) section also

VTL

The Cloud Virtual Tape Library (VTL) device support information is listed below. Please Note:

1. Configure the virtual device with the unique inquiry string as listed in this document. Emulating other devices is not supported.
2. Tested iSCSI versions of virtual tape libraries are listed in the "iSCSI Solutions" section, under the "SAN Infrastructure components" bookmark. Please reference the limitations listed in that section.

Amazon Web Services

Storage Gateway	Release Date	Connectivity	Virtualization Platform	Library Inquiry Drive Inquiry
Gateway-Virtual Tape Library [1] [2] [3] [4] [5]	16-Dec-2014	iSCSI	VMware ESXi Microsoft Hyper-V AWS EC2 [6] [7] [8]	AWS~~~~Gateway-VTL IBM~~~~ULT3580-TD5

1. Please read through the Best Practice guide for the Gateway-VTL before deployment: <https://www.veritas.com/support/en_US/article.100014745>
2. The Storage Gateway is offered as a service and therefore specific software versions are not available. Please refer to release dates: <<http://aws.amazon.com/releasenotes/AWS-Storage-Gateway>>
3. For the AWS Storage Gateway-VTL user guide, please refer to: <<http://docs.aws.amazon.com/storagegateway/latest/userguide/gateway-vtl.html>>
4. Backup Exec Simplified Disaster Recovery (SDR) is not supported.
5. See the [Amazon iSCSI VTL](#) section also
6. Please refer to AWS documentation for hypervisor and host requirements: <<http://docs.aws.amazon.com/storagegateway/latest/userguide/Requirements.html>>
7. For information on the AWS Storage Gateway in EC2 please refer to the following documentation: <<https://aws.amazon.com/marketplace/pp/B00AZ4Q6MM>>
8. Import operations are limited to 64 tapes at a time. Please see <https://www.veritas.com/support/en_US/article.100043731.html>

Disk Targets

For this basic support, any device recognized and supported by the Windows platform should work with Backup Exec. Mapped network drives are not supported. UNC paths are supported. The disk devices listed in these two sections have been tested with Backup Exec as a result of a formal joint business agreement and OEM relationship, **but are not intended to be a complete list of compatible devices.**

For "basic" disk storage capabilities, Backup Exec does not exclude or block recognition for disk devices. Basic disk storage devices can be seen in the [Disk Storage](#) and [Disk Cartridge](#) sections. This information is organized by vendor and provides information on the storage devices tested, the Inquiry Strings (if applicable), the type of interface, media type, and any special notes on a per device basis.

If the desired device is not already listed in this section, customers are encouraged to run the B2D test tool to verify their desired device's level of functionality. If Backup Exec is not already installed, the B2D test tool can be downloaded from https://www.veritas.com/content/support/en_US/article.100020569. Instructions for use are in that same technote. Backup Exec Technical Support will be unable to offer assistance if the device experiences failures during the B2Dtest and the customer should contact the hardware vendor for advice and assistance.

Devices running the Windows Unified Data Storage Server OS which provides iSCSI target functionality are supported per the Software Compatibility List. See <http://www.backupexec.com/compatibility> for supported operating system details.

Devices running the Windows Storage Server OS (sometimes referred to as a NAS) can be used as a Backup Exec Media Server if the operating system version is on the Software Compatibility List (SCL). Some examples are the Dell NX3200, the HPE StoreEasy series, and others. If the server meets the prerequisites for adding the Backup Exec Deduplication Option, then that server's local disks can be used for deduplication by that Backup Exec Media Server. See <http://www.backupexec.com/compatibility> for supported operating system details.

If the server vendor supports the server as an iSCSI target, then it can be supported for remote deduplication storage from other Backup Exec Media Servers. Refer to the HCL Disk Storage section for tested systems, but other systems would be supported also. Please see the deduplication best practices document at https://www.veritas.com/content/support/en_US/doc/72686287-131623464-0/v70445236-131623464

A server running Windows Storage Server is NOT supported for OpenStorage (OST) target storage use, unless that server/appliance appears in the OST section of the HCL. A server running Windows Storage Server may be used with the Remote Agent for Windows Servers (RAWS) to send data to an OST appliance.

For more advanced disk capabilities, refer to the [OST-Appliance section](#) or [VSS Providers for Offhost backup](#) sections. The presence of the disk device in these advanced sections is required for support.

Granular Restore Technology (GRT) support, per deduplication type

Deduplication type	GRT support method
Backup Exec Deduplication Disk Storage	Non-GRT and GRT backups are supported and no staging is needed for GRT restores.
Hardware based deduplication OpenStorage appliances	1. Non-GRT and GRT backup are supported but staging is needed at time of GRT restores. Backups will be faster and restores slower (due to staging). 2. Alternately if the device supports it then one can create B2D using CIFS share and then run backups. Backups will be slower but GRT restores will be faster.
NBU50x0 appliance	Non-GRT and GRT backups are supported and no staging is needed for GRT restores.
Pure Disk appliance, also known as Classic Pure Disk	Non-GRT and GRT backups are supported and no staging is needed for GRT restores.

Disk Storage

The disk devices listed in this section have been tested with Backup Exec, but are not intended to be a complete list of compatible devices.

To clarify: not all supportable disk device are listed in this section. There are simply too many variations to certify them all.

If the desired device is not already listed in this section, customers are encouraged to run the B2D test tool to verify their desired device's level of functionality. If Backup Exec is not already installed, the B2D test tool can be downloaded from https://www.veritas.com/content/support/en_US/article.100020569. Instructions for use are in that same technote. Backup Exec Technical Support will be unable to offer assistance if the device experiences failures during the B2Dtest and the customer should contact the hardware vendor for advice and assistance. If you do run B2Dtest on a disk device not listed here, please submit the results to Backup_Exec_HCL@veritas.com.

Disk Device Legend

Value	Meaning
Connectivity	The method by which the device communicates with the Backup Exec server.
✓	Character used to denote successful completion of acceptance testing for the item listed in the column.
Basic B2D	Basic functionality of a device as it relates to being used as a Backup-to-Disk device (Disk Storage) in Backup Exec. Backup Exec's Granular Restore Technology (GRT) is not included in Basic B2D.
GRT Tested	Granular Restore Technology (GRT) has been validated specifically for this device. The presence of a checkmark ✓ in this column indicates that no staging is needed for GRT restores. The presence of an "S" in this column indicates that staging may be needed at time of GRT restores. This is typically exhibited with CIFS connectivity.
BEDedup	Backup Exec Deduplication is the native method for deduplication - enabled via an additional "Backup Exec Deduplication Option", and referred to as "Backup Exec Deduplication Disk Storage". Only Local disks may be used for deduplication storage. Removable interfaces like USB and FireWire are also not supported due to the perceived temporary connection method and issues that can arise from a device that is unsafely removed or appears on a different path. For Devices with a supported interface the absence of a check here does not signify that the device will not be supported, merely that deduplication tests have not been run in combination with this device. See comments above regarding, "not intended to be a complete list of compatible devices". The Backup Exec Deduplication Option is recommended for use on a dedicated / non-removable volume as the location to store the deduplication disk storage. For this reason, there are no dedup checkboxes in the Disk Cartridge device section. While possible, the usage of the "Backup Exec Deduplication Option" with USB, FireWire, and remote disks implies the customer is doing so at their own risk and without official Veritas support.

Disk Cartridge

The disk devices listed in this section have been tested with Backup Exec, but are not intended to be a complete list of compatible devices.

To clarify: not all supportable disk device are listed in this section. There are simply too many variations to certify them all.

Note: Granular Restore Technology (GRT) is not supported on disk cartridge devices if the backup spans media.

Note: USB 3.0 devices are supported (when available from the vendor).

Note: To view the disk inquiry string: Open Computer Management, Go to Device Manager | Disk drives, Double click on the RDX drive, Click on the Details tab, For the Property drop-down, select 'Hardware Ids', View the inquiry string in the Value section

Disk Device Legend

Value	Meaning
^	Character used to denote a space in the INQUIRY STRING.
✓	Character used to denote support for the item listed in the column.
WinBES	The listed device is supported directly attached to a Windows Backup Exec Server platform. See the SCL (http://www.backupexec.com/compatibility) for supported Windows Server Operating System platforms.

OST-Appliance

OpenStorage Servers are intelligent storage devices that interface to Backup Exec Servers and Remote Agents for Windows (with Direct Access) via the Veritas OpenStorage (OST) API. The vendor supplying the Storage Server appliance provides a software Plug-in, which is installed on each Backup Exec Server and Remote Agent for Windows (with Direct Access) that is attached to the OpenStorage Server.

OST functionality is available on supported Windows Backup Exec 22 Backup Exec Server and Remote Agent for Windows platforms.

Please see the Backup Exec System Administrator's Guide for more information on how to use OST.

Attention: OpenStorage (OST) appliance users: Backup Exec 22 may require a new OST plug-in from your appliance vendor.

Please contact your vendor for access to this new plug-in. If needed, the required Backup Exec 22 plug-in details will be listed as a footnote in the "Storage Server Family" column, per vendor.

Manual duplicate (set copy) for WORM enabled LSU does not show the settings to define the retention values for target LSU. Please refer this link https://www.veritas.com/content/support/en_US/article.100054710 . This has been fixed in BE 22.1 or later releases.

In the tables below, "Basic Duplication" refers to server-side or client-side deduplication.

Where support is shown for Windows Server 2012, Windows Server 2016, Windows Server 2019, or Windows Server 2022, please reference the Software Compatibility List (<http://www.backupexec.com/compatibility>) for supported operating system versions.

Hewlett Packard Enterprise

Storage Server Family	Storage Server Family Members	Plug-in	Data Interface	Windows Server 2012	Windows Server 2016	Windows Server 2019	Windows Server 2022	Supported OpenStorage Functionality
StoreOnce VSA (VMware) [1] [5] [6]	StoreOnce VSA (VMware)	4.4 [2]	Ethernet	✓	✓	✓	✓	Basic Deduplication, Optimized Duplication, WORM

1. The HPE v4.1 and v4.2 OST plugins do not support client-side deduplication for systems running the Backup Exec remote agent. This will be addressed by HPE in a future release of the plugin. For now, deduplication from the remote system must be done via server-side.

2. Support for "WORM" with HPE StoreOnce plug-in 4.4 requires BE 22.2 or later. See https://www.veritas.com/content/support/en_US/doc/59226813-160717569-0/v60224998-160717569

3. Version 3.14 code is the minimum required for the StoreOnce 3100, 3520, 3540, 5100, or 5500 devices. The code is not backwards compatible with earlier versions of StoreOnce hardware. For more information, please contact Hewlett Packard Enterprise.

4. Refer to the following technote for FC configuration information. https://www.veritas.com/support/en_US/article.100041993

5. There is a capacity reporting issue with early versions of the 4.2 plugin. Please upgrade to 4.2.1.2532 (or greater) or consult HPE about bugs 123275 & 124555

6. StoreOnce VSA is a virtual appliance. For device details and platform support refer to: <https://www.hpe.com/h20195/v2/GetDocument.aspx?docname=c04328820>

1. For more information, see <<http://www.quantum.com/ServiceandSupport/SoftwareandDocumentationDownloads/OSTClientPlugIn/Index.aspx>>

2. Quantum DXi OST plugins, version 10.0.0 and above, support 64 bit systems only.

3. The Quantum hostname and storage server name needs to be different to avoid connection issues.

4. Please note: this device is nearing the end of support. Please see the 'Retiring Soon' section .

5. WORM support requires plug-in version 11.0.0 or later, Quantum DXi Software 4.6.0 or later and BE 21.4 or later.

6. This device is a virtual appliance. Representative VMware-supported ESX4, ESXi4, or ESXi5 servers/storage were tested. Refer to <http://downloads.quantum.com/dxiv1000/6-67611-01_DXi_V1000_QuickStartGuide_RevA.pdf>

Quest

Storage Server Family	Storage Server Family Members	Plug-in	Data Interface	Windows Server 2012	Windows Server 2016	Windows Server 2019	Windows Server 2022	Supported OpenStorage Functionality
DR 12g Series [1] [2] [3] [4] [5]	DR4100, DR6000	3.2	Ethernet	✓				Basic Deduplication, Optimized Duplication
DR 12g Series [1] [2] [3] [4] [5]	DR4100, DR6000	4.0	Ethernet	✓	✓			Basic Deduplication, Optimized Duplication
DR 13g Series [1] [2] [3] [4] [5]	DR4300, DR4300e, DR6300	3.2	Ethernet	✓				Basic Deduplication, Optimized Duplication
DR 13g Series [1] [2] [3] [4] [5]	DR4300, DR4300e, DR6300	4.0	Ethernet	✓	✓			Basic Deduplication, Optimized Duplication
QoreStor [6] [7] [8]	QoreStor	4.1	Ethernet	✓	✓	✓	✓	Basic Deduplication, Optimized Duplication

1. Dell EMC has separated/sold the DR appliance division into Quest. Customers should migrate to running newer Quest branded software on the appliance and using the Quest branded plugin. Download Quest stuff from <<https://support.quest.com/download-product-select>>

2. For 4.0: The Quest packaged 4.x plug-in installer should be used to install the required OST plugin. The Quest packaged 4.0.2 (or newer) plug-in installer now installs two plugin files, one named for Dell and one named for Quest. When configuring storage within Backup Exec 22, and if your DR appliance is running 4.0.2 (or newer), please select the "Quest" provider. The Backup Exec adamm.log will document which plugin is being used in the line "OST Server: DELL:DR4300-HPVxxxx" versus "OST Server: QUEST:DR4300-HPVxxxx". There are no performance differences between the different named plugins. There are no changes to the container on the Quest DR appliance side. The container may be using either the Symantec or the Veritas OST access protocol. In other words: The Dell-named libstspiDellMT.dll works & is supported by Backup Exec 22. The preferred Quest-named libstspiocaMT.dll works & is supported in Backup Exec 22.

3. Please see the Quest Migration Guide for changing Dell containers to Quest containers <<https://support.quest.com/download/downloads?id=6084223>>
4. Plug-in version 4.1.0.327 (or higher) is required for NEW Backup Exec 22 installations. Older (supported) versions of the plugin (3.2 & 4.0) are acceptable when Backup Exec is upgraded in-place to Backup Exec 22.
5. The 3.2 PLUGINS work with BE 22, but the 3.2 INSTALLER does NOT work with BE 22.
6. Plug-in version 4.1.0.327 (or higher) is required for NEW Backup Exec 22 installations. Older (supported) versions of the plugin (4.1) are acceptable when Backup Exec is upgraded in-place to Backup Exec 22.
7. QoreStor is supported on Linux, ESX & Hyper-V platforms.
8. The Quest packaged 4.x plug-in installer should be used to install the required OST plugin. The Quest packaged 4.0.2 (or newer) plug-in installer now installs two plugin files, one named for Dell and one named for Quest. When configuring storage within Backup Exec 22, please select the "Quest" provider. The Backup Exec adamm.log will document which plugin is being used in the line "OST Server: DELL:hostname:container" versus "OST Server: QUEST:hostname:container". There are no performance differences between the different named plugins. There are no changes to the container on the Quest QoreStor side. The container may be using either the Symantec or the Veritas OST access protocol. In other words: The Dell-named libstspiDellMT.dll works & is supported by Backup Exec 22. The preferred Quest-named libstspiocaMT.dll works & is supported in Backup Exec 22.

VSS Providers for Offhost backup

This list of tested Volume Shadow Copy Service (VSS) components represents what has been tested in Veritas labs, or in Veritas-supervised partner labs. To ensure compatibility, Veritas, the device manufacturers, and the operating system vendor must support the combination of VSS components. Note: The Backup Exec Advanced Disk Based Backup Option, now part of the Enterprise Server Option, is required for VSS. See the Administrator's Guide for more details on usage of the VSS provider.

Please Note:

1. The provider version and array firmware listed in this section are the **minimum** levels that are supported. Where more than one entry level is listed in these "Minimum" columns, this implies a newer version has been tested. The earlier versions are the minimum versions required. The hardware vendor may specify rules for pairing of the provider and firmware versions.
2. The Array Firmware listed in this section are the **minimum** levels that are supported.
3. The Advanced Open File job options are not supported for use with Dynamic Disk Snapshots.

TotalStorage DS4000 series [1] [3]	DS4100 (FAStT100), DS4200, DS4300 (FAStT600), DS4400 (FAStT700), DS4500 (FAStT900), DS4700, DS4800	Fibre Channel	04.10.22.00, 7.60.40.00, 6.60.00.00, 7.60.00.00, 6.12.00.00	VSS Provider SmVssProvider	09.70.06, 10.70.08

1. Only basic disks are supported, per the VSS provider.

2. Only Snapshots are supported. Clones are not currently supported.

3. In order to use the ADBO VSS feature, the IBM "Flash Copy" Premium Feature must be purchased.

Virtual Tape Libraries with Drives

The virtual tape device support information is listed below. This information is organized by vendor and provides information on the level of software tested, inquiry string (vendor ID + product ID), and any other important notes about the hardware and its compatibility.

Please Note:

1. The virtual tape device software listed in this section are the **minimum** software levels that are supported. Where more than one software level is listed, this implies a newer version has been tested. The earlier software version is the minimum version required.
2. Configure the virtual device with the unique inquiry string as listed in this document. Emulating other devices is not supported.
3. For each virtual library only the virtual tape drives that are listed are supported. This information can be found with each virtual section. Other virtual tape drive types are not supported even if the real device is supported with Backup Exec.
4. Do not fill up the disk space on a virtual device. Doing so may cause unpredictable behavior of the device. The device vendor will then have to recover from any errors that result from a full disk.
5. When moving virtual volumes to physical media it works best if the virtual device has a volume size that is dynamic. Make sure that the virtual volume is slightly smaller than the physical volume. When you migrate the data to physical media you will need to ensure that there is enough space on the physical device in order to accommodate the virtual volume size.
6. It is highly recommended that Backup Exec move virtual volumes to physical media so that the data can be restored directly from physical media rather than needing to utilize the virtual device as an intermediary restoration point. If the virtual tape library moves virtual volumes to physical media Backup Exec is not aware of the physical media and may not be able to recover that data directly from that physical media.
7. When a virtual volume becomes overwriteable, the virtual device is not aware that the data is no longer needed. When Backup Exec overwrites that virtual volume the virtual library is aware that the rest of the data is not needed and it can free up the disk space. Because of this, the virtual device may appear to be much closer to capacity than it really is.
8. Tested iSCSI versions of virtual tape libraries are listed in the "iSCSI Solutions" section, under the "SAN Infrastructure components" bookmark. Please reference the limitations listed in that section.
9. The software versions documented here are obtained from the library interface (web or physical) and may not match the firmware version logged in the adamm.log.
10. All VTLs shared with the Linux server(s) must be approved for both RMAL and ESO. Zoning or LUN masking are possible methods of preventing Linux servers from seeing a VTL not approved for RMAL.

Virtual Tape Library/Drive Legend

Value	Meaning
^	Character used to denote a space in the INQUIRY STRING.
✓	Character used to denote support for the item listed in the column.
WinBES	The listed device is supported in a Windows Backup Exec Server platform. Shareability is determined by the ESO column. See the SCL (http://www.backupexec.com/compatibility) for supported Backup Exec Server Operating System platforms.
RMAL	The listed device is supported in a Remote Media Agent for Linux platform. Shareability is determined by the ESO column. See the SCL (http://www.backupexec.com/compatibility) for supported Remote Media Agent for Linux platforms.
NDMP	The listed device is supported for use with NDMP. See the "NDMP Option" section for platform specific details. Shareability is determined by the ESO column.

Virtual Tape Library/Drive Legend

Value	Meaning
ESO	The listed device is supported by the Enterprise Server Option using Fibre Channel. ESO refers to WinBES, and optionally RMAL or NDMP.

- Capacity and compression reporting is not currently supported for this device.
- The ETERNUS line was previously known as the CentricStor.
- Backup Exec supports Fujitsu's Path-to-Tape (PTT) feature available on this VTL. PTT enables Backup Exec duplication jobs to move data directly from virtual tape to physical tape while off-loading the actual copying of data from the Backup Exec server to the VTL. This is referred to as "DirectCopy to tape" in the Backup Exec Administrator's Guide.
- The default port for Backup Exec remote agents may conflict with the NDMP port used for the Path-to-Tape feature. Refer to the following technote to change the default port: https://www.veritas.com/content/support/en_US/article.100016014
- This VTL also supports the following emulated tape drives: HPE Ultrium 1-SCSI, HPE Ultrium 2-SCSI, HPE Ultrium 3-SCSI, HPE Ultrium 4-SCSI, HPE Ultrium 5-SCSI, IBM ULTRIUM-TD1, IBM ULTRIUM-TD2, IBM ULTRIUM-TD3, IBM ULTRIUM-TD4, and the IBM ULTRIUM-TD5. Older device software versions may not support newer emulated drive generations.

H3C

Virtual Tape Library Families

When a hardware family of devices is listed, refer to this section for a definition of family members. Generally speaking, the family name and members are defined by the hardware manufacturer, and share common operational traits. In some cases, a specific member of the family may not be supported in the same fashion as the other members. When this occurs, a footnote in the hardware category section will identify this limitation.

Tape Drives

The tape drive support information is listed below. This information is organized by vendor and provides information on the tape drives tested, the supported Inquiry Strings, the type of interface, media type, and any special notes on a per device basis.

Please Note:

1. To ensure support, a device must be supported by Veritas and the device manufacturer.
2. Unless otherwise noted, Veritas tape class drivers were used when testing Windows-supported devices.
3. At times the manufacturer may refer to their devices by product name, which differs from the model name.
4. WORM is supported only on tape drives with a footnote indicating WORM support and a possible minimum firmware or software level. These footnotes are documented in this stand-alone tape drive section. To determine if WORM is supported in an automation environment. (i.e. physical tape libraries), please refer to the tape drive manufacturers stand-alone drive section and check for a footnote. If WORM is supported in the manufacturers drive section, then it is supported in all automation, unless documented otherwise in the automation section.
5. Hardware encryption is supported only on tape drives with a footnote indicating hardware encryption support and a possible minimum firmware or software level. These footnotes are documented in this stand-alone tape drive section. To determine if hardware encryption is supported in an automation environment. (i.e. physical tape libraries), please refer to the tape drive manufacturers stand-alone drive section and check for a footnote. If hardware encryption is supported in the manufacturers drive section, then it is supported in all automation, unless documented otherwise in the automation section.
6. The "ULTRIUM-TD" and the "ULT3580-TD" inquiry strings are interchangeable (both are supported), unless otherwise indicated. The "ULTRIUM-HH" and the "ULT3580-HH" inquiry strings are interchangeable (both are supported), unless otherwise indicated.
7. Unless specifically stated in technote article https://www.veritas.com/content/support/en_US/article.100021088 , tape libraries or tape drives attached to a RAID controller are not supported.
8. The HPE One Button Disaster Recovery (OBDR) feature is no longer supported with Backup Exec.
9. The LTO 'Encrypt Only' feature is currently not supported with any robotic library or tape drive. This new LTO feature is being investigated by Veritas.
10. Backup Exec supports LTO-7 Type M media (also known as M8 cartridges) in the following manner. These are LTO-7 cartridges that have been formatted to a new LTO-8 standard and their native capacity increased from 6TB to 9TB.
 - M8 cartridges are only supported with LTO-8 tape drives, either stand-alone tape drives or in an M8 supported tape library.
 - M8 cartridges pre-formatted by the media vendor are supported.
 - M8 cartridges manually formatted using hardware vendors' software tools or tape library firmware features (automatic or manual) are supported.
 - Backup Exec does NOT have the ability to convert LTO-7 cartridges to M8 format.
 - Backup Exec requires version 20 Update 1 (aka 20.1) (or higher) to support hardware encryption on M8 media.
 - Backup Exec requires version 20 Update 1 (aka 20.1) (or higher) to provide pre-configured bar code rules and pre-defined media type for M8 cartridges.
 - Customers should use caution when re-labeling the bar code on used LTO-7 cartridges as an LTO-7 cartridge with good data could be accidentally erased in a tape library with firmware that automatically re-initializes tapes with M8 bar codes.
 - For details on M8 (formatting methods, technical information, supported barcodes, etc.) please consult the tape hardware documentation or vendor.
 - For details on M8 please see <https://www.lto.org/technology/typem/>

Tape Drive Legend

Value	Meaning
^	Character used to denote a space in the INQUIRY STRING.
✓	Character used to denote support for the item listed in the column.
WinBES	The listed device is supported in a Windows Backup Exec Server platform. See the SCL (http://www.backupexec.com/compatibility) for supported Backup Exec Server Operating System platforms.
RMAL	The listed device is supported in a Remote Media Agent for Linux platform. See the SCL (http://www.backupexec.com/compatibility) for supported Remote Media Agent for Linux platforms.

1. This is a rack mounted enclosure for Dell EMC certified tape drives and should not be confused with actual Dell EMC tape drives.

2. WORM tape is supported with this drive.

3. T10 Hardware Encryption is supported.

4. Failures may occur with 'Initilize' jobs (on new tape cartridge) and 'Long Erase' jobs with LTO9 tape cartridge. For more information, see https://www.veritas.com/content/support/en_US/article.100051049.html

1. Backup Exec Simplified Disaster Recovery (SDR) is not supported.

2. T10 Hardware Encryption is supported.

Tape Libraries with Drives

The library support information is listed below. This information is organized by vendor manufacturer/model, inquiry string (vendor ID + product ID), the interface of the library, and any other important notes or information relevant to the hardware and its compatibility.

Partitioning a library using the library management for sharing between applications and/or servers is a hardware specific feature available in certain library storage systems. Customers using this hardware feature with Backup Exec are supported, but due the variations in design and implementation, technical support is provided in a "reasonable effort" basis only. This means that Veritas Technical Support will work with customers to resolve issues associated only with the Backup Exec portion of the shared configurations, and any issues that cannot be duplicated outside of the shared environment will be the responsibility of the OEM hardware vendor to support.

Please Note:

1. This listing is for library support and the tape drive it was tested with. If a tape library is configured with a drive other than that listed, it has not been tested and will not be supported.
2. Tested iSCSI versions of tape libraries are listed in the "iSCSI Solutions" section, under the "SAN Infrastructure components" bookmark. Please reference the limitations listed in that section.
3. The "ULTRIUM-TD" and the "ULT3580-TD" inquiry strings are interchangeable (both are supported), unless otherwise indicated. The "ULTRIUM-HH" and the "ULT3580-HH" inquiry strings are interchangeable (both are supported), unless otherwise indicated.
4. Unless specifically stated in technote article https://www.veritas.com/content/support/en_US/article.100021088 , tape libraries or tape drives attached to a RAID controller are not supported.
5. Libraries or drives with an interface column of "SCSI" require an interface card or bridge to establish a connection to an FC switch. Please see the "SAN Infrastructure components/Fibre Channel Infrastructure/Bridges and Routers" section for supported devices.
6. Please refer to the stand-alone tape drive section (above) and look under the **drive manufacturer** to determine WORM or hardware encryption support status.
7. The LTO 'Encrypt Only' feature is currently not supported with any robotic library or tape drive. This new LTO feature is being investigated by Veritas.

Tape Library Legend

Value	Meaning
^	Character used to denote a space in the INQUIRY STRING.
✓	Character used to denote support for the item listed in the column.
WinBES	The listed device is supported in a Windows Backup Exec Server platform. Shareability is determined by the ESO column. See the SCL (http://www.backupexec.com/compatibility) for supported Backup Exec Server Operating System platforms.
RMAL	The listed device is supported in a Remote Media Agent for Linux platform. Shareability is determined by the ESO column. See the SCL (http://www.backupexec.com/compatibility) for supported Remote Media Agent for Linux platforms.
NDMP	The listed device is supported for use with NDMP. See the "NDMP Option" section for platform specific details. Shareability is determined by the ESO column.
ESO	The listed device is supported by the Enterprise Server Option using Fibre Channel. ESO refers to WinBES, and optionally RMAL or NDMP.

1. The ETERNUS LT20 only supports half height drives. The drive referenced in this row is a full height drive.

2. Failures may occur with 'Initilize' jobs (on new tape cartridge) and 'Long Erase' jobs with LTO9 tape cartridge. For more information, see https://www.veritas.com/content/support/en_US/article.100051049.html

1. Please note: this device is nearing the end of support. Please see [the 'Retiring Soon' section](#) .
2. Failures may occur with 'Initilize' jobs (on new tape cartridge) and 'Long Erase' jobs with LTO9 tape cartridge. For more information, see https://www.veritas.com/content/support/en_US/article.100051049.html
3. Minimum firmware level of 1.20 is required.
4. LTO7 is not supported on MSL8096 & MSL8048
5. LTO8 is not supported on MSL8096 & MSL8048
6. Only MSL2024 supports LTO-9.

1. Minimum firmware levels of 0018 are required for the library and B171 for the drive.
2. IBM markets this under two names, with and without the words "Express Model". They are identical and both are supported.
3. L1 barcode labels on a cleaning media will cause a cleaning utility job to hang indefinitely. Recommend using L2 (or above) barcode labels for cleaning media.
4. L1 and L2 barcode labels on a cleaning media will cause a cleaning utility job to hang indefinitely. Recommend using L3 (or above) barcode labels for cleaning media.
5. Capacity and compression reporting is not currently supported for this device.
6. Due to IBM ALMS virtualizing the tape slots: the tapes are not in the slot order as they appear in the BE GUI and the cleaning tapes are not visible to BE. Therefore drive cleaning must be done via the library itself.
7. For optimal performance, do not mix generations of 3592 drives in a single logical library. Media problems can result when different drive generations are mixed. Please see <http://www-01.ibm.com/support/docview.wss?uid=swg21570099>
8. For optimal performance, do not mix generations of 3592 drives in a single logical library. Media problems can result when different drive generations are mixed. Please see <http://www-01.ibm.com/support/docview.wss?uid=swg21687064>
9. Failures may occur with 'Initilize' jobs (on new tape cartridge) and 'Long Erase' jobs with LTO9 tape cartridge. For more information, see https://www.veritas.com/content/support/en_US/article.100051049.html

1. Library firmware 1.90 is fully supported. Library firmwares 1.93 & 1.95 have broken serialization, they do NOT work, and are NOT supported. 1.97 (or higher) is supported.
2. Failures may occur with 'Initilaze' jobs (on new tape cartridge) and 'Long Erase' jobs with LTO9 tape cartridge. For more information, see https://www.veritas.com/content/support/en_US/article.100051049.html
3. Minimum library firmware of BlueScale10.4.0-20080908F is suggested for proper import/export operation. Library firmware version is determined in the library GUI, not in the inquiry string.
4. Refer to Spectra KB article 1286 for incompatible media library issues. (Spectra login required)
5. Please check compatibility of Spectra Logic T-series member with LTO9 tape. For more information, see <https://www.ibm.com/support/pages/spectra-logic-spectra-library-configuration-information-ibm-spectrum-protect-server-formerly-tsm>

Tape Library Families

When a hardware family of devices is listed, refer to this section for a definition of family members. Generally speaking, the family name and members are defined by the hardware manufacturer, and share common operational traits. In some cases, a specific member of the family may not be supported in the same fashion as the other members. When this occurs, a footnote in the hardware category section will identify this limitation.

NDMP Platforms

The NDMP platform support information is listed below. This information is organized by vendor manufacturer/model(s), minimum software required, method of connection, and any other important notes or information relevant to the hardware and its compatibility.

The storage devices supported by the NDMP option are included with the Tape Library / Virtual Tape Library sections. In these sections, search by storage device vendor, then model, then look for a check [✓] in the NDMP column for support. Please note that the presence of a check means that **Veritas will support the storage device and NDMP combination IF and ONLY IF the NDMP vendor also supports the library / drive combination**. Please refer to the NDMP vendors' documentation for storage device support and possible limitations. If known, these compatibility lists are listed in the notes section by vendor.

Please Note:

1. The tape library drivers are supplied by Veritas with Backup Exec 22.
2. The tape drive drivers are supplied by the NDMP platform vendor when using Direct-attach or 3-Way NDMP Connection methods.
3. NDMP only supports libraries (real or virtual). Stand-alone tape drives are not supported when using Direct-attach or 3-Way NDMP Connection methods.
4. Validate that firewalls allow NDMP traffic.
5. LTO9 support is fairly new. Please verify the LTO drives supported with your NDMP platform provider.
6. This NDMP hardware section is only required when using the Backup Exec NDMP option. The Backup Exec NDMP option is typically used for backing up file data on the below listed NDMP/NAS servers. If the NDMP/NAS server contains VM images or databases, those items are typically better protected via other Backup Exec Agents or Options.
7. Minor ("double-dot") or patch versions of the software listed in the tables below are also supported. (Example: "v5.0" means versions v5.0.1, v5.0.2, etc. are also supported.)

NDMP Option minimum requirements:

1. NDMP v4 is required.
2. The NDMP server has the Network Data Management Protocol enabled.

The following table describes the supported NDMP connection methods. Veritas supports these connection methods, provided the NDMP platform vendor does as well.

NDMP Connection Methods

Connection Method	Description
Direct-attach	Data travels from NDMP disk to a tape device on the same NDMP host, or from NDMP disk to a tape device on a SAN. Backup data is NOT sent over the local Ethernet network. The tape device is connected directly to the NAS device via SCSI or Fibre Channel. This is the only NDMP Connection Method that is "LAN free".
Remote	Data travels from the NDMP host, across the local Ethernet network to a Backup Exec server, and then to a tape or disk device connected to the Backup Exec server. Any Backup Exec supported tape or disk device can be used with this Connection Method. A checkmark is NOT needed in the NDMP column of the tape library since the target tape or disk device is not directly connected to the NDMP/NAS. This is the only Connection Method available if the NDMP server doesn't support attaching a local tape library via SCSI or Fibre Channel.
3-way	Data travels from disk on an NDMP host to a tape device on another NDMP host of the same vendor/brand/family. Backup data is sent over the local network. This requires multiple NDMP servers from the same vendor/brand/family. The target tape device must have a checkmark in the NDMP column.

VNX series (members) [3]	VNX File 7.0	Direct Attach, Remote, 3-way	✓	✓	✓
VNX series (members) [3]	VNX File 7.1	Direct Attach, Remote, 3-way	✓	✓	✓

1. Dell EMC versioning clarification: Dell EMC marketing refers to it as v5, but it shows up in the adamm.log as "Operating System Version 1.5.0.xxxx". This is consistent with their earlier versioning style, v4 = 1.4, v3 = 1.3, v2 = 1.2, etc.
2. Dell EMC versioning clarification: Dell EMC marketing refers to it as v6, but it shows up in the adamm.log as "Operating System Version 1.6.0.xxxx". This is consistent with their earlier versioning style, v4 = 1.4, v3 = 1.3, v2 = 1.2, etc.
3. EMC's HCL can be found here: <<https://elabnavigator.emc.com>> Select "Customers and Partners" and then select PDFs and Guides and open Celerra .pdf
4. Direct-attach support has a maximum tape block size of 64kB by default. Consult Unity documentation to enable proper functionality for larger block sizes.
5. Direct-attach support requires Unity Operating Environment version 4.4.1.1538211294 or later.
6. Direct-attach support requires that SCSI reservations be enabled manually (the scsiReserve setting). Please see Unity documentation.
7. EMC VNXe firmware 3.1.5.6801782 (or higher) is required.
8. VNXe supports "3-way" with the restriction that VNXe can't support the NDMP Tape Server part of a 3-way operation. 3-way requires a VNX or Celerra data mover as the NDMP Tape Server. ESO is supported when used with a 3-way connection.

1. NetApp's HCL can be found here: <http://www.netapp.com/us/solutions/a-z/data-protection-devices.html>
2. Browsing of volumes (Backup Selections) is not supported by NetApp. Please use the Include/Exclude feature to configure the backup selections. Please see https://www.veritas.com/content/support/en_US/article.100013508
3. NetApp clustered data ONTAP (CDOT) features such as service name virtualization and multi-tenancy (VSERVER) capabilities are not supported. Node-scoped NDMP mode is required to be enabled. More information is available at <https://library.netapp.com/ecmdocs/ECMP1368707/html/GUID-21B82CCB-97F1-4FA6-BB22-095E97979110.html>
4. 8.2.4 requires NetApp P-release version 8.2.4p3 (or higher patch)
5. 8.3.1 is not supported. This is due to changes made by NetApp that causes Verify to fail during Incremental Backups.
6. NetApp Data ONTAP replication feature SnapMirror is not supported.
7. 8.3.2 requires NetApp P-release version 8.3.2p1 (or higher patch)
8. Node-scope continues to work till 9.10 with Backup Exec.
9. NetApp ONTAP feature FlexGroup is not supported.
10. ONTAP Select is a virtual server and ONTAP tested on Select supports FAS/AFF series. For more info, please refer: https://docs.netapp.com/us-en/ontap-select/concept_ots_overview.html#software-defined-storage

NAS Sources

NAS Source support information is listed below. This information is organized by vendor manufacturer/model(s), minimum software required, and any other important notes or information relevant to the hardware and its compatibility.

NAS devices listed in this sections have been tested with Backup Exec as a result of formal joint business agreements and OEM relationships.

Hardware is selected and prioritized for certification based on market research and input from the field, including customer feedback. If a customer would like to have their hardware considered for inclusion on this HCL, simply submit the request via an email [<Backup_Exec_HCL@veritas.com>](mailto:Backup_Exec_HCL@veritas.com) . Requests will be reviewed by the appropriate Veritas Product Management team members for possible certification, with final decisions based on the overall fit with the product, target market, and frequency of request.

Overland Storage

SAN Infrastructure Components

The SAN infrastructure components section of the HCL is split into three sections - traditional fibre channel infrastructure components, FCoE infrastructure, and iSCSI "solutions". The fibre channel and FCoE sections list possible components to be used interchangeably, whereas the iSCSI section lists SAN components to be used as a solution; a complete set of hardware from hardware or software initiator, through interconnect (if any), to storage device.

Fibre channel SANs: To verify support for tape libraries, or virtual tape libraries (VTL), refer to the column labelled "ESO" in the respective "Tape Libraries with Drives" or "Virtual Tape Libraries with Drives" sections.

Libraries or drives with an interface column of "SCSI" require an interface card or bridge to establish a connection to an FC switch. Please see the content below for supported devices.

Fibre Channel Infrastructure

This list of supported fibre-channel storage area network (SAN) components represents what has been tested in Veritas labs, or in Veritas-supervised partner labs.

The Backup Exec FC and FCoE Shared Storage Option (SSO) hardware support model for Storage Area Network (SAN) components is now an open model (this is a new policy for Backup Exec 22). In other words, all Fibre Channel over Ethernet (FCoE) converged network adapters (CNA), Fibre Channel (FC) host bus adapters (HBA), switches, bridges, and routers are supported in a SAN environment. This means that if a FCoE or FC component is causing a problem, Veritas will work with the component vendor in an attempt to resolve the problem, but resolution is not guaranteed. Veritas and most hardware vendors listed are members of TSANet. To ensure compatibility, the device manufacturers and the operating system vendor must support the combination of SAN components.

This list of SAN components represents equipment that has been used during Backup Exec qualification testing of devices listed in previous sections of this document. It is not intended to be a list of supported components.

To verify support for tape libraries, or virtual tape libraries (VTL), refer to the column labelled "ESO" in the respective "Tape Libraries with Drives" or "Virtual Tape Libraries with Drives" sections.

HBAs

Note: The OS and Version information indicate the tested platform. Unless specifically noted all other OS Versions are supported.

Veritas recommends (where possible), the following to avoid complications in the SAN environment:

1. Avoid mixing HBAs from different vendors.
2. All HBAs should use the same firmware, BIOS and driver revision.
3. Consult the hardware vendor's web site for up-to-date firmware and driver updates.
4. Where support is shown for Windows Server 2012, or Windows Server 2016, please reference the Software Compatibility List (<http://www.backupexec.com/compatibility>) for supported operating system versions.

FCoE Infrastructure

This list of supported Fibre Channel over Ethernet (FCoE) storage area network (SAN) components represents what has been tested in Veritas labs, or in Veritas-supervised partner labs.

The Backup Exec FC and FCoE Shared Storage Option (SSO) hardware support model for Storage Area Network (SAN) components is now an open model (this is a new policy for Backup Exec 22). In other words, all Fibre Channel over Ethernet (FCoE) converged network adapters (CNA), Fibre Channel (FC) host bus adapters (HBA), switches, bridges, and routers are supported in a SAN environment. This means that if a FCoE or FC component is causing a problem, Veritas will work with the component vendor in an attempt to resolve the problem, but resolution is not guaranteed. Veritas and most hardware vendors listed are members of TSANet. To ensure compatibility, the device manufacturers and the operating system vendor must support the combination of SAN components.

This list of SAN components represents equipment that has been used during Backup Exec qualification testing of devices listed in previous sections of this document. It is not intended to be a list of supported components.

To verify support for tape libraries, or virtual tape libraries (VTL), refer to the column labelled "ESO" in the respective "Tape Libraries with Drives" or "Virtual Tape Libraries with Drives" sections.

CNAs

Please Note:

1. All like CNAs within a SAN should use the same firmware, BIOS and driver revision as recommended by CNA vendors.
2. Consult the hardware vendor's web site for current firmware and driver updates (where applicable).
3. Running a server's Ethernet and Fibre Channel over Ethernet (FCoE) traffic on the same CNA port is not supported.
4. Where support is shown for Windows Server 2012, or Windows Server 2016 please reference the Software Compatibility List (<http://www.backupexec.com/compatibility>) for supported operating system versions.

iSCSI Solutions

This list of tested iSCSI components represents what has been tested in Veritas labs, or in Veritas-supervised partner labs. The listed components in each row should be used together to ensure compatibility. This section is a mix of physical and virtual TAPE libraries. iSCSI disk solutions are listed in the appropriate Disk sections of this HCL.

Please Note:

1. Each column within the configuration tables represents the key components that were tested in an iSCSI SAN with the Backup Exec Enterprise Server Option (ESO).
2. To ensure compatibility, Veritas, the device manufacturers, and the operating system vendor must support the combination of iSCSI devices.
3. Configurations that use the Microsoft iSCSI initiator aren't supported with the Simplified Disaster Recovery (SDR) option.
4. The firmware and driver versions listed are minimum recommended levels. For device support and firmware/driver updates, please contact your hardware vendor.
5. Where possible, avoid mixing of vendor HBAs. All like HBAs within your SAN should use the same firmware, BIOS and driver revision.
6. In some cases, tape libraries with mixed media drive types were tested. Either drive type may be used.
7. The "ULTRIUM-TD" and the "ULT3580-TD" inquiry strings are interchangeable (both are supported), unless otherwise indicated. The "ULTRIUM-HH" and the "ULT3580-HH" inquiry strings are interchangeable (both are supported), unless otherwise indicated.

Amazon

Library ~ Firmware ~ Inquiry	Drive ~ Firmware ~ Inquiry	HBA ~ Driver ~ Firmware	Interconnect ~ Firmware
Amazon AWS Storage Gateway VTL ~ 16-Dec-2014 ~ AWS^Gateway-VTL [1]	IBM TotalStorage 3580 Ultrium 5 ~ N/A ~ IBM^ULT3580-TD5	Microsoft iSCSI Software Initiator ~ msiscsi.sys 6.1.7601.18386 - N/A	Amazon AWS iSCSI device ~ N/A
Amazon AWS Storage Gateway VTL ~ 16-Dec-2014 ~ AWS^Gateway-VTL [1]	IBM TotalStorage 3580 Ultrium 5 ~ N/A ~ IBM^ULT3580-TD5	Microsoft iSCSI Software Initiator ~ msiscsi.sys 6.2.9200.16813 - N/A	Amazon AWS iSCSI device ~ N/A
Amazon AWS Storage Gateway VTL ~ 16-Dec-2014 ~ AWS^Gateway-VTL [1]	IBM TotalStorage 3580 Ultrium 5 ~ N/A ~ IBM^ULT3580-TD5	Microsoft iSCSI Software Initiator ~ msiscsi.sys 6.3.9600.16384 - N/A	Amazon AWS iSCSI device ~ N/A

1. This device includes Cloud features. Please see the Amazon Cloud Storage section for specifics.

BDT

Library ~ Firmware ~ Inquiry	Drive ~ Firmware ~ Inquiry	HBA ~ Driver ~ Firmware	Interconnect ~ Firmware
BDT RDSor ~ R1.03 ~ BDT^RDSor_T [1]	Hewlett Packard Enterprise Ultrium 1840 LTO4 ~ N/A ~ HP^Ultrium^4-SCSI	Microsoft iSCSI Software Initiator ~ msiscsi.sys 6.0.6001.18000 - N/A	BDT Direct iSCSI Device ~ N/A

1. To Import, insert the RDX media into the slot(s) and select Scan from Backup Exec. Due to the physical differences between the RDstor and a tape library, regular import jobs will result in error messages in the import job log.

1. Each VTL may only be assigned to a single server (no sharing), but the physical library may be connected to multiple servers.
2. See the referenced document for more details. (https://www.veritas.com/content/support/en_US/article.100005429)
3. The VTL may only be assigned to a single server (no sharing).
4. This VTL has been validated as a backup device for use with VMware.

Retiring Soon

The devices in this section will not be listed as supported in the Hardware Compatibility List for the next major Backup Exec release. Many of these devices are end-of-life products that are no longer supported by the manufacturer. This is a prediction, subject to frequent change, until the next version is actually released. This section is primarily for your education only as **IT HAS NO DIRECT IMPACT ON YOUR CURRENT SUPPORTABILITY**.

If this list contains a device you are actively using and are concerned about lack of support, please email [<Backup_Exec_HCL@veritas.com>](mailto:Backup_Exec_HCL@veritas.com) with details of the specific device you are using.

1. For information on Cloud Volumes, go to <https://demo.cloudvolumes.hpe.com/welcome/>

2. See the [HPE OST appliance](#) section also

Retiring OST-Appliance

This OST section contains rows that frequently indicate that support for a plug-in will expire in the next version of Backup Exec, per the OST vendor's request. Please do not assume that support for the entire device is withdrawn. Your OST device and OST plug-in version probably just need to be updated.

Support End-of-Life

EOL Notice: These devices are no longer officially supported for use with this version of Backup Exec. This is a periodic process to bring Backup Exec support in line with what is still supported by the hardware vendors and/or the device's age, capacity or performance. Please be aware that different vendors may have different EOL policies for their particular model of a common device. See the HCL introduction for further clarification of our policies and goals. No changes were made to Backup Exec to drop support or recognition for these devices, so it is fully expected that they may continue to work with this version of Backup Exec. But if a problem is discovered with the device, it is likely that vendor support, repair parts, and/or firmware fixes are no longer available which limits the ability of our Veritas technical support team to help resolve your issue.

OST Note: The OST section contains rows that frequently indicate that support for a plug-in has expired, per the OST vendor's request. Please do not assume that support for the entire device is withdrawn. Your OST device and OST plug-in version probably just need to be updated.

End-of-Life OST- Cloud Storage

Datish Systems OpenDedupe
