1 Veritas DLO VxUpdate.

This feature is useful for the DLO administrators to check and perform any updates available for the currently installed version of the DLO. In addition, it also allows you to update some of the key third-party components such as Apache HTTP Server and Apache Tomcat.

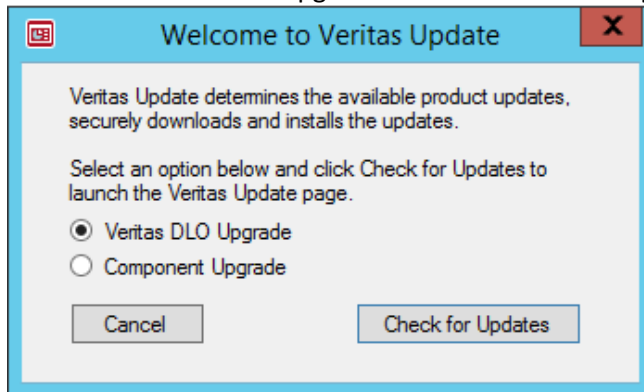

Note: The upgrade can only be performed by using the same account used for DLO server installation.

1.1 To update Veritas DLO using patch Update

1. From the Tools menu in the DLO Administration Console, select **Run Veritas Update**.

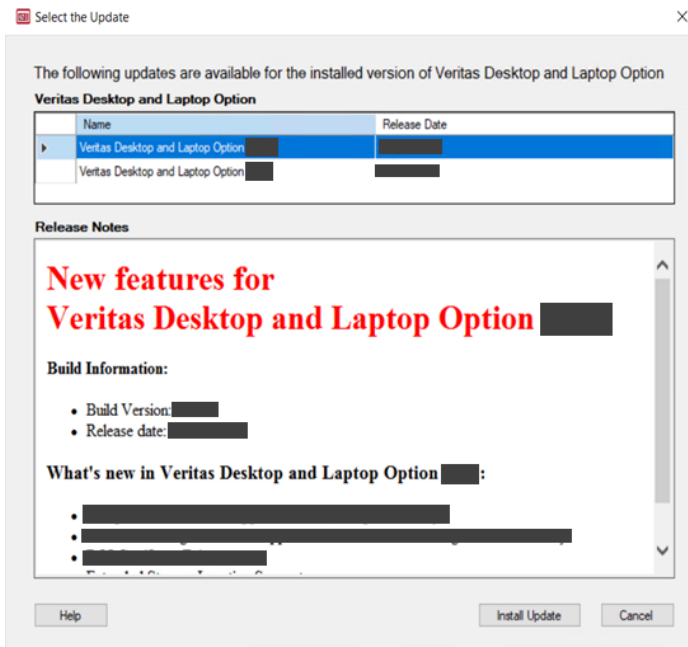

2. Select the Veritas DLO Upgrade and Click **Check for Updates**.

A list of available patches will be displayed for the installed DLO Version along with their corresponding release notes are shown based on the selected patch update.

Note: As the patches are cumulative, SP2 patch will include all the changes of SP1 patch. Therefore, whenever a latest patch is available, it will be displayed.

3. Select the patch that will update the installed components, and then click **Install Update**.

"Install the Update" dialogue box appears.

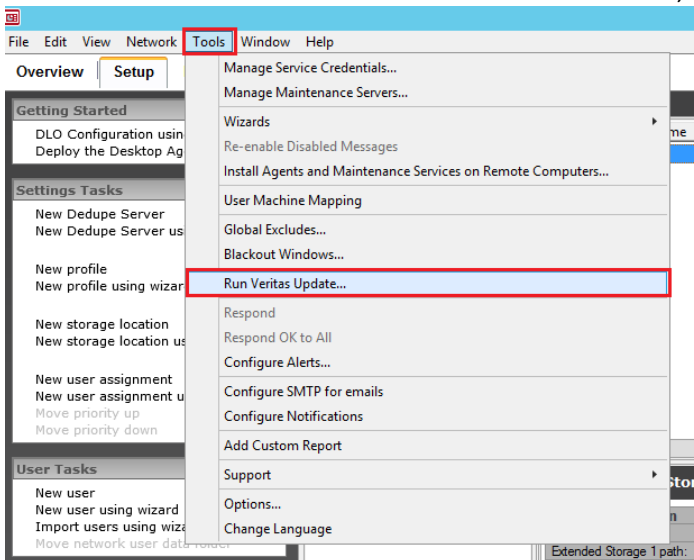

4. Click **Update**.

Now proceed with the installation.

1.2 To update Veritas DLO Component

Note: Before you install the Components, make sure that all related files, folders, and command prompts are closed. Otherwise, the installation may not be successful.

1. From the Tools menu in the DLO Administration Console, select **Run Veritas Update**.

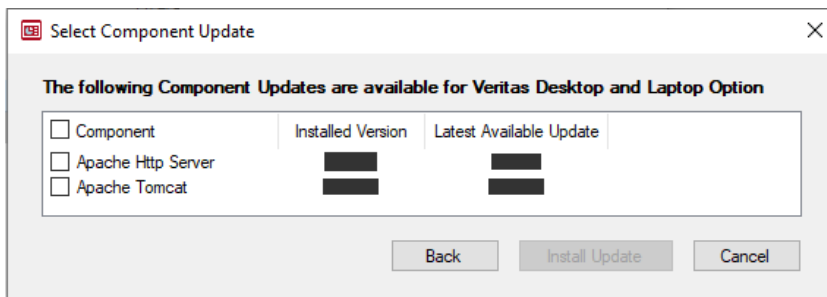

2. Select the **Component Upgrade** and Click **Check for Updates**.

A list of latest Tomcat and Apache version of the available components will be displayed for the installed DLO Version.

3. Select the components and Click **Install Update**.

Note: The support is currently available only for Apache HTTP Server and Apache Tomcat Server.

A confirmation message appears, indicating that the selected Veritas DLO Components are upgraded successfully.

Note: In a distributed environment, individual components and patch can also be updated through DLOVxUpdate shortcut menu available in the Start Menu.
