## General Notes

All the software configurations listed in this document have been qualified with Veritas Access Appliance 8.3.

Since the number of combinations is quite large, it is not possible to test them all for compatibility. If a particular service pack or version of an application is not listed as specifically tested by Veritas, it may work fine, but has not been explicitly tested with the Veritas Access product. Software applications that are not on the Veritas Access Appliance Software Compatibility List (SCL) are provided “commercially reasonable effort” support only. Commercially reasonable effort support allows for escalations based on unqualified software, but if a problem is determined to be software-specific, the problem is not guaranteed to be resolved.

The information in this document will be updated as necessary, so subscribe to it to get automatic notifications of any changes.

## Cloud vendors

The following cloud vendors are supported for tiering.

Vendor	Product
Amazon	Amazon S3, Glacier, GovCloud (US)
Microsoft	Azure
Google	Google cloud
Veritas	Veritas Access S3

## Protocols

The following protocols are supported for Veritas Access components.

Protocol	Version
NFS	V3, V4
CIFS	SMB 2.x, 3.0
S3	-
